Fakultät Wirtschaftsingenieurwesen und Gesundheit

Bachelor of Engineering (B.Eng.)

Industrial Engineering (IIE) – Bachelor Medical Engineering (IME) – Bachelor	Winter semester 2024/2025

Table of Contents **Page**

Preliminary Notes

Note:

Please note in particular the regulations of the study and examination regulations of the degree programme in the currently valid version.

Structure of the study programme:

The course comprises a standard duration of 7 semesters.

Registration formalities:

In principle, all examinations must be registered via the Student Office through PRIMUSS. Additional formalities are listed in the module descriptions.

Abbreviations:

ECTS = The European Credit Transfer and Accumulation System (ECTS) is a points system for the recognition of academic achievements.
SWS = semester hours per week (Semesterwochenstunden)
SPO = Programme and Examinations Regulations (Studien- und Prüfungsordnung)
ASPO = General Study and Examination Regulations (Allgemeine Studien- und Prüfungsordnung)

Workload:

One credit point is based on a workload of approximately 30 hours.

Recognition of academic achievements:

Please pay attention to the corresponding application processes via the Student Office.

vhb:

vhb (German: virtuelle Hochschule Bayern / English: virtual university Bavaria) is an online learning platform with online courses from different universities in Bavaria. Further information can be found here: https://www.vhb.org/en/

Curriculum

Electives

In the third study phase (semester 5, 6 and 7), the students must complete

- 4 electives in the field Science/Technology,
- 3 electives in the field Economics / Medicine and
- 3 electives in the field Interdisciplinary.

All Students are **recommended to consult with the Director of the Study Programme to select appropriate modules**.

There are electives provided by

- OTH Amberg-Weiden (OTH)
- Language Center of OTH Amberg-Weiden (LC)
- Virtuelle Hochschule Bayern (vhb)

Students who have acquired their university entrance qualification in German / Students with knowledge of the German language of at least C1 can select "Basic Electives" instead of the German I-IV modules. More about this in the chapter "Basic Electives / Languages".

The modul decriptions of vhb can be found at https://www.vhb.org/.

The provided electives are listed in the following table (*Please note that this catalogue may change each semester. There is no claim to a repeated offer of a particular module. Additional electives may be offered and outlined in the catalogue in due time*):

#	Module groups / modules	SWS	ECTS	Offered by	Rythm	Language	Basic Elective
	Science/Technology (4 must be selected)						
T10	Sensors for Smart Systems	4	5	OTH	Winter	English	yes
T11	Service- und Instandhaltungsmanagement	4	5	OTH	Summer	German	yes
T12	Robotik	4	5	OTH	Winter	English	no
T13	Data Science I	4	5	OTH	Winter	English	no
T14	SAP-Anwendungsentwicklung für Logistik 4.0	4	5	OTH	Winter	German	no
T15	IoT Technology	4	5	OTH	Winter	English	yes
T16	Communication Technology	4	5	OTH	Summer	English	yes
T17	Crowd Engineering	4	5	OTH	Winter/Summer	English	no
T18	Fabrikplanung	4	5	OTH	Summer	Deutsch	no
T19	Databases	4	5	OTH	Summer	English	no
T20	Computer Aided Engineering	4	5	OTH	Winter	German	no
T21	Product Development	4	5	OTH	Summer	German	no
T22	Digital Image Processing	4	5	OTH	Winter	English	no
	Economics (2 must be selected for IIE)						
E10	Business Model Innovation	4	5	OTH	Winter	English	yes
E11	Technischer Einkauf	4	5	OTH	Winter	German	no
E12	Unternehmensplanung und -führung	4	5	OTH	Winter	German	no
E13	International Marketing	2	5	vhb	see vhb	English	yes
E14	International Supply Chain Management	4	5	vhb	see vhb	English	yes
E15	Performance Management in Teams	4	5	vhb	see vhb	English	yes
	Medical (3 must be selected for IME)						
M10	Therapeutic Systems	4	5	OTH	Winter	English	no
M11	Medical Product Development	4	5	OTH	Winter	English	no
M12	Medical Measurement Technologies	4	5	OTH	Winter	English	no
M13	In-vitro diagnostics	4	5	OTH	Winter	English	yes
	Interdisciplinary (3 must be selected)						
I10	Smart Factory	4	5	OTH	Winter	English	no
I11	Research and Evaluation Methods	4	5	OTH	Winter	English	yes
I12	Usability Engineering	4	5	OTH	Summer	German	yes
I13	Ethics in Business and Technology	4	5	OTH	Summer	English	no
I14	Practical Project	4	5	OTH	Summer	English	no
I15	Entrepreneurial Project 1: Developing a Digital Solution	4	5	OTH	Winter	English	no
I16	Entrepreneurial Project 2: Business Plan for a Digital Product	4	5	OTH	Winter	English	no
I17	Basics Sustainability	4	5	vhb	see vhb	English	yes
I18	Blockchain Applications for Business	3	6	vhb	see vhb	English	yes

As an interdisciplinary elective, also further competencies in languages can be affored (see chapter "Basic Electives / Languages", page 8).

Basic Electives / Languages

Students are required to complete **four** Basic Electives (German I-IV or Basic Elective, ID I1-I4 as outlined in the curriculum) **for a total of 20 ECTS**. Different choices are recommended depending on a student's knowledge of the German language. **All Students** are recommended to **consult with the Director of the Study Programme to select appropriate modules**. Participation in any language classes other than German I-IV must be approved by the Head of the Study Programme or the deputy via formal application by email.

Students with knowledge of the **German** language of **less than level B2.2***				
* In order to enable sufficient language skills to complete the practical study semester as well as participation in all elective modules, some of which are offered in German, a sufficient knowledge of the German language must be proven by a language certificate corresponding to level B2 according to the Common European Framework of Reference for Languages before entering the third study section. For this purpose, the following modules must be selected if the German knowledge is below C1:				
Basic Electives	**Module ID**	**SWS**	**ECTS**	**Rhythm**
German I (B1.1)*	I1	4	5	Winter and Summer
German II (B1.2)*	I2	4	5	Winter and Summer
German III (B2.1)*	I3	4	5	Winter and Summer
German IV (B2.2)*	I4	4	5	Winter and Summer

Students with knowledge of the **German** language of **B2.2****				
** In order to enable progression to subsequent Master's degree programmes, students are recommended to deepen their knowledge of the German language. For this purpose, it is highly recommended that you choose German V and German VI.				
Recommended Basic Electives	**Module ID**	**SWS**	**ECTS**	**Rhythm**
German V (C1.1 part 1)**	I20	4	5	Winter and Summer
German VI (C1.1 part 2)**	I21	4	5	Winter and Summer
Additional two modules marked by "Basic Electives" from chapter "Electives", page 7.	*See chapter "Electives", page 7*			

Students who have **acquired their university entrance qualification in German** / Students who acquire their official B2 (better C1.1) certificate outside OTH AW				
Electives	**Module ID**	**SWS**	**ECTS**	**Rhythm**
Foreign Language I***	I22	4	5	Winter and Summer
Foreign Language II***	I23	4	5	Winter and Summer
Required modules from chapter "Electives", page 7.	*See chapter "Electives", page 7*			

*/** The detailed description of the German language courses can be found in the Module Handbook of the Language Center at https://www.oth-aw.de/international/internationales-profil/sprachenzentrum/modulhandbuch/. German V and VI may either be taken as basic elective or as regular elective, but **only with approval by the Head of the Study Programme** or the deputy, and each course can only be credited once. **For all German classes, please register directly with the language center**:
https://www.oth-aw.de/international/internationalesprofil/sprachenzentrum/anmeldung/

*** The detailed description of the foreign language courses can be found in the Module Handbook of the Language Center at https://www.oth-aw.de/international/internationales-profil/sprachenzentrum/modulhandbuch/. However, neither German nor English classes may be selected as Foreign Language class. For advanced students, the language modules of the TM study programme are also open. However, there is no claim to participation.
After having obtained approval by the Head of Study Programme or the deputy, for all language classes, please register directly with the language center:
https://www.oth-aw.de/international/internationalesprofil/sprachenzentrum/anmeldung/

Please also check the faqs of the language center https://www.oth-aw.de/en/international/international-profile/language-centre/questions-regarding-language-courses/, as you might find some of your questions answered here.

Module descriptions

Mandatory modules

Science/Technology

Mathematics I

Classification	Module ID	Kind of Module	Number of Credits (ECTS)
	T1	Mandatory	5

Location	Language	Duration of Module	Frequency of Module	Max. Number of Participants
Weiden	English	One Semester	Winter Semester	60

Module Convenor	Professor / Lecturer
Prof. Dr. Kambis Veschgini	Prof. Dr. Kambis Veschgini

Prerequisites*

None

*** Note: Please also note the prerequisites according to the examination regulations in the respective valid SPO version.**

Usability	Teaching Methods	Workload
The module is part of the "Science/Technology" module group in the Bachelor's degree programme in Industrial/Medical Engineering (IIE/IME). The usability in other courses of study must be checked in each individual case.	Online-course of vhb: IEM - Introduction to Engineering Mathematics	Contact time: 60 h Self-study: 60 h Exam preparation = 30 h = 150 h

Learning Outcomes

Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

- **Professional Skills:**
  - Students know and understand important mathematical tools for industrial engineers and can use them to analyze and solve mathematical problems and tasks in the areas mentioned in "Course content" (at the level of relevant literature for universities of applied sciences).
- **Methodological Skills:**
  - They understand mathematical models of technical and economic issues and can translate simple technical or economic problems into mathematical problems.
- **Personal Skills (Social Competence and Self-competence):**
  - They are able to independently acquire further mathematical knowledge and skills**.**

Course Content

The contents of this course are central to first-year-students in physics, chemistry, biology, computer science and all engineering sciences. It contents the following chapters

1. Functions, sequences and limits
2. Differential calculus
3. Integral calculus
4. Ordinary differential equations
5. Vectors, matrices, linear systems of equations

Teaching Material / Reading

Available via Moodle

Internationality (content-related)

The course content is universally applicable.

Method of Assessment (if applicable, notes on multiple choice as form of examination - APO §9a)

Form of Examination*1)	Type/Scope incl. Weighting *2)	Learning Objectives/Competencies to be Assessed
Written Exam (Kl90), online	90 minutes Bonus points can be earned by submitting additional exercises. These can amount to a maximum of 20% of the total number of points in the exam.	The exam covers the above mentioned professional and methodological skills.

*1) Please refer to the applicable overview of the forms of examination at the OTH Amberg-Weiden

*2) Please provide additional information on the weighting (in % share) and, if applicable, explain the bonus system.

Technical Mechanics

Classification	Module ID	Type of module	Number of Credit Points (ECTS)
	T2	Mandatory	5

Location	Language	Duration of the module	Frequency of Module	Max. Number of participants Max. Number of Participants
Weiden	English	One semester	Winter Semester	100

Module Convenor	Professor / Lecturer
Prof. Dr. Kambis Veschgini	Prof. Dr. Kambis Veschgini

Prerequisites

None
*** Note: Please also note the prerequisites according to the examination regulations in the respective valid SPO version.**

Usability	Teaching Methods	Workload
The module is part of the "Science/Technology" module group in the Bachelor's degree programme in Industrial/Medical Engineering (IIE/IME). The usability in other courses of study must be checked in each individual case.	Seminar-based teaching with exercises.	Contact time: 60 h Self-study: 90 h Total effort: 150 h

Learning Outcomes

After successfully completing the module, students have the following professional, methodological and personal skills:

Professional competence:

- Application of principles and methods of statics of rigid bodies in the solution of mechanical engineering problems (technical competence)

Methodological competence:

You are able to

- apply the tools they have learned to case studies and exercises as well as practical tasks and systematically collect, interpret and evaluate relevant information. (Application and system competence)
- Analyze technical constructions with regard to mechanical load (analysis skills)
- develop solutions based on the acquired instrumental knowledge (problem-solving skills)

Personal competence (social competence and self-competence):

- They are able to express complex technical information competently both orally and in writing, understand technical solutions to problems and communicate effectively with the relevant target group (communication skills)

Course Content

- Fundamentals of statics: force systems, internal forces, trusses, centers of gravity, friction.
- Fundamentals of kinematics: Description of the movement of mass points and rigid bodies.

Teaching material / Reading

- Engineering Mechanics 1 - 3; Russell C. Hibbeler, Pearson publishing house, 2018
- Dankert, J.; Dankert, H.: Engineering Mechanics, Springer Vieweg, 2013 (eBook)
- Gross, et al.: Engineering Mechanics 1-3 (Statics, Elastostatics, Kinetics), Springer Vieweg, 2018 (eBook)
- Gross, et al.: Task Collections on Engineering Mechanics 1-3 (Statics, Elastostatics, Kinetics), Springer Vieweg, 2018 (eBook)

Internationality (in terms of content)
Internationality

The content is valid in any industrial engineering environment.

Module examination (if applicable, note on multiple choice - APO §9a)
Method of Assessment

Form of examination[*1)]	Type/scope incl. weighting[*2)]	Learning objectives/competences to be tested
Written Exam (Kl90)	Written Exam, 90 minutes.	With the exam, all of the above-mentioned competencies are tested, see Learning Outcomes and Course Content.

[*1)] Please refer to the applicable overview of the forms of examination at the OTH Amberg-Weiden
[*2)] Please provide additional information on the weighting (in % share) and, if applicable, explain the bonus system.

Mathematics II

Classification	Module ID	Kind of Module	Number of Credits (ECTS)
	T3	Mandatory	5

Location	Language	Duration of Module	Frequency of Module	Max. Number of Participants
Weiden	English	One Semester	Summer Semester	60

Weiden	English	One semester	Winter semester	100

Module Convenor	Professor / Lecturer
Prof. Dr.-Ing. Marc Hainke	NN

Prerequisites

None
*** Note: Please also note the prerequisites according to the examination regulations in the respective valid SPO version.**

Usability	Teaching Methods	Workload
The module is part of the "Science/Technology" module group in the Bachelor's degree programme in Industrial/Medical Engineering (IIE/IME). The usability in other courses of study must be checked in each individual case.	Seminar-based teaching with exercises; design work	Contact time: 60 h Self-study/follow-up: 20 h Design work: 50 h CAD course: 20 h Total effort: 150 h

Learning Outcomes

After successfully completing the module, students have the following professional, methodological and personal skills:

Professional competence:
The students
- are able to create technical drawings and analyze and evaluate more complex technical drawings (technical expertise)
- gain a basic understanding of the design rules for constructions (technical competence)
- learn how to design with a commercial CAD programme (components, assemblies, creation of technical drawings)

Methodological competence:
You are able to
- apply the tools they have learned to case studies and exercises as well as simple practical tasks and systematically collect, interpret and evaluate relevant information. (Application and system competence)
- Analyze technical drawings (analysis skills)
- develop solutions based on the acquired instrumental knowledge (problem-solving skills)

Personal competence (social competence and self-competence):
- They are able to express complex technical information competently both in writing and orally, to understand technical problem solutions in order to find solutions in group work and to communicate with the relevant target group in a well-founded and effective manner. (Communication skills)

Course Content

- Product development process (PEP)
- Basics of methodical construction
- Design principles
- Representation and dimensioning of workpieces
- Edges and surfaces
- Tolerances and fits
- Selected technical drawings
- Technical documentation and presentation techniques
- Representation and application of machine elements (in particular screw connections, shaft-hub connections, rolling bearings, gear wheels, bolts, springs)
- Design project: Design of a mechanical device in the CAD system

Teaching material / Reading

- Laibisch, S.; Weber, Ch.: Technisches Zeichnen - Selbständig lernen und effektiv üben, Springer Vieweg, 4th edition, 2013 (eBook)
- Kurz, U.; Wittel, H.: Böttcher/Forberg: Technical Drawing - Fundamentals, Standardization, Exercises and Project Tasks, Springer Vieweg, 26th edition, 2014 (eBook)
- Naefe, P.: Einführung in das Methodische Konstruieren, Springer Vieweg, 2nd edition, 2012 (eBook)
- Feldhusen, J.; Grote, K.-H.: Pahl/Beitz: Konstruktionslehre - Methoden und Anwendung erfolgreicher Produktentwicklung, Springer Vieweg, 8th edition, 2013 (eBook)
- Wittel, H.; et al: Roloff/Matek Maschinenelemente: Standardization, Calculation, Design, Springer Vieweg, 22nd edition (eBook)

Internationality (in terms of content)
Internationality

The content is valid in any international industrial engineering environment.

Module examination (if applicable, note on multiple choice - APO §9a)
Method of Assessment

Form of examination[*1)]	Type/scope incl. weighting[*2)]	Learning objectives/competences to be tested
Exercise performance (Übl)	Several exercises are completed, from which the overall grade is calculated. The content, date and weighting of the exercises will be announced at the beginning of the semester.	With the exam, all of the above-mentioned competencies are tested, see Learning Outcomes and Course Content.

	1st construction project (70%, group work with individual performance) divided into three subtasks: - Plan and clarify the task - Conceptualizing and designing - Development and quality assurance 2nd CAD course (30%, individual performance) All examinations must be completed in the same semester. Alternative dates will be offered for excused absences.	

*1) Please refer to the applicable overview of the forms of examination at the OTH Amberg-Weiden
*2) Please provide additional information on the weighting (in % share) and, if applicable, explain the bonus system.

Production Technology

Classification	Module ID	Kind of Module	Number of Credits (ECTS)
	T5	Mandatory	5

Location	Language	Duration of Module	Frequency of Module	Max. Number of Participants
Weiden	English	One Semester	Winter Semester	60

Module Convenor	Professor / Lecturer
Prof. Andreas Dörner	Prof. Andreas Dörner

Prerequisites*

None
*** Note: Please also note the prerequisites according to the examination regulations in the respective valid SPO version.**

Usability	Teaching Methods	Workload
The module is part of the "Science/Technology" module group in the Bachelor's degree programme in Industrial/Medical Engineering (IIE/IME). The usability in other courses of study must be checked in each individual case.	Lecture; case studies; practical exercise; demonstration	Contact time: 60 h Self-study: 60 h Exam preparation: 30 h Total effort: 150 h

Learning Outcomes
Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

- **Professional Skills:**
  - Based on a broad and integrated knowledge of various manufacturing processes and current trends like Industry 4.0, students will be able to evaluate suitable alternative manufacturing processes for production. In doing so, students know how to take into account quality, economic efficiency and flexibility as well as the economical use of resources.
  - students are able to plan suitable manufacturing processes for products and their components using the manufacturing technologies and related information systems (e.g., MES, ERP, PLM) as well as analytical approaches.
- **Methodological Skills:**
  - students can review and evaluate manufacturing processes using in-depth subject-oriented methodological knowledge. This includes, for example, the evaluation of occurring process forces or predicting tool life.
- **Personal Skills (Social Competence and Self-competence):**
  - students are able to work in a team of experts on questions of production technology in a responsible manner and to solve complex subject-related problems in a team.

Course Content

- Basics of Production Management
- Production Technology Basics
- Additive Manufacturing
- Industry 4.0 & Smart Factory
- Information systems for production (MES, ERP, PLM)
- Analytics & Maintenance Approaches for Factories

Teaching Material / Reading

Teaching material and recommended reading will be communicated via Moodle

Internationality (content-related)

The content is valid in any international industrial engineering environment.

Method of Assessment (if applicable, notes on multiple choice as form of examination - APO §9a)

Form of Examination*1)	Type/Scope incl. Weighting *2)	Learning Objectives/ Competencies to be Assessed
Written Exam (Kl90)	Written Exam, 90 minutes Bonus system: There is the possibility of grade improvement (German: "Notenverbesserung") through voluntary performances during the course. By preparing a presentation of a short relevant topic according to the semester-specific list of offers, a bonus of max. 10 % of the total number of points attainable in the written examination can be added in the same semester to the points actually attained in the written examination. The grade calculation then refers to the total points, whereby more than a grade of 1.0 cannot be achieved. The bonus points apply only in the semester in which they are earned. The list of offers is presented at the beginning of the semester and a registration deadline for the acceptance by the students will be announced. The offer exists only in semesters in which a course is offered by the lecturer. There is no individual entitlement for students to an offer such an extra ((German: "Notenverbesserung") by the lecturer.	With the exam and a possible bonus exercise, all of the above-mentioned competencies are tested.

*1) Please refer to the applicable overview of the forms of examination at the OTH Amberg-Weiden
*2) Please provide additional information on the weighting (in % share) and, if applicable, explain the bonus system.

Physics

Classification	Module ID	Type of module	Number of Credit Points (ECTS)
	T6	Mandatory	5

Location	Language	Duration of the module	Frequency of Module	Max. Number of participants Max. Number of Participants
Weiden	English	One semester	Winter semester	100

Module Convenor	Professor / Lecturer
Prof. Dr. Kambis Veschgini	Prof. Dr. Kambis Veschgini

Prerequisites

None
*** Note: Please also note the prerequisites according to the examination regulations in the respective valid SPO version.**

Usability	Teaching Methods	Workload
The module is part of the "Science/Technology" module group in the Bachelor's degree programme in Industrial/Medical Engineering (IIE/IME). The usability in other courses of study must be checked in each individual case.	Seminar-based teaching with exercises, peer instruction and comprehension questions, practical course.	Contact time: 60 h Self-study: 90 h Total effort: 150 h

Learning Outcomes

After successfully completing the module, students have the following professional, methodological and personal skills:

- Students know and understand the most important physical facts for engineers in basic areas of physics (see course content) and can analyze and solve physical tasks and problems in the areas listed under "Course content" (at the level of relevant literature for universities of applied sciences).
- They can investigate physical facts experimentally and carry out and evaluate simple experiments.
- They are able to familiarize themselves independently with other areas of physics.

Course Content

- Mechanics
- Vibrations
- Shafts
- Thermodynamics

Teaching material / Reading

- Tipler: Physics for Scientists and Engineers, Springer Spektrum
- Mills: Bachelor-Trainer Physics, Springer Spektrum
- Kuypers: Physics for Engineers and Scientists, Wiley-VCH
- Script "Physics for Engineers. Terms, concepts, formulas" (for mechanics and vibrations)

Internationality (in terms of content)
Internationality

The content is valid in any international industrial engineering environment.

Module examination (if applicable, note on multiple choice - APO §9a)
Method of Assessment

Form of examination[*1)]	Type/scope incl. weighting[*2)]	Learning objectives/competences to be tested
Written Exam (Kl90)	Written Exam, 90 minutes.	With the exam, all of the above-mentioned competencies are tested, see Learning Outcomes and Course Content.

*** Note: Please also note the prerequisites according to the examination regulations in the respective valid SPO version.**

Usability	Teaching Methods	Workload
The module is part of the "Science/Technology" module group in the Bachelor's degree programme in Industrial/Medical Engineering (IIE/IME). The usability in other courses of study must be checked in each individual case.	Lectures with integrated practical demonstrations and exercises	Contact time: 60 h Self-study and exam preparation: 90 h Total workload: 150 h

Learning Outcomes
Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

- **Professional Skills:**
  - Students will be able to explain the essential basics and core functions of operational performance (focus: production of goods) and their interrelationships.
  - They can apply selected calculation methods.
- **Methodological Skills:**
  - Students can comprehend technical contents and use them in a problem-oriented manner.
- **Personal Skills (Social Competence and Self-competence):**
  - Students can participate in discussions on the topic using the specific vocabulary.

Course Content

Basic documents (drawings, parts lists, work plans) and essential tasks of order processing in manufacturing companies, i. a. from the areas of work planning, purchasing, production and assembly.
-

Teaching Material / Reading

Scripts, exercises, review questions, additional media (photo, video, ...)

Internationality (content-related)

The content is valid in any international industrial engineering environment.

Form of Examination*1)	Type/Scope incl. Weighting *2)	Learning Objectives/Competencies to be Assessed
Written Exam (Kl90)	Written Exam, 90 minutes Information about multiple-choice questions and a possible bonus system will be provided starting in the semester the module is taught for the first time	With the exam and a possible bonus exercise, all of the above-mentioned competencies are tested.

*1) Please refer to the applicable overview of the forms of examination at the OTH Amberg-Weiden
*2) Please provide additional information on the weighting (in % share) and, if applicable, explain the bonus system.

Electrical Engineering

Classification	Module ID	Type of module	Number of Credit Points (ECTS)
	T8	Mandatory	5

Location	Language	Duration of the module	Frequency of Module	Max. Number of participants Max. Number of Participants
Weiden	English	One semester	Summer Semester	100

Module Convenor	Professor / Lecturer
Prof. Dr.-Ing. Manfred Beham	NN

Prerequisites

None
*** Note: Please also note the prerequisites according to the examination regulations in the respective valid SPO version.**

Usability	Teaching Methods	Workload
The module is part of the "Science/Technology" module group in the Bachelor's degree programme in Industrial/Medical Engineering (IIE/IME). The usability in other courses of study must be checked in each individual case.	Seminar-based teaching with exercises including laboratory.	Contact time: 60 h Exercises/tutorial: 30 h Self-study/follow-up: 30 h Exam preparation: 20 h Internship: 10 h Total effort: 150 h

Learning Outcomes

After successfully completing the module, students have the following professional, methodological and personal skills:

Professional competence:
- They can determine electrical variables when analyzing circuits and apply their laws when evaluating electrical components in energy technology or electronics.
- You will be able to apply electrical measurement technology to practical issues.

Methodological competence:
You are able to,
- apply the instruments and methods learned to case studies and practical tasks.
- investigate electrical issues experimentally, carry out and evaluate simple experiments in a laboratory environment.
- design simple circuits for direct or alternating current circuits, design circuit diagrams and dimension the necessary components and determine their electrical parameters.

Personal competence (social competence and self-competence):
- You will be able to express complex technical issues in electrical engineering competently both orally and in writing, understand technical documentation and communicate effectively with the relevant target group.

Dual students:
Due to the practical experience already gained in the dual company and the specialist skills already acquired in the field of electrical engineering, dual students have already gained sufficient practical experience in dealing with electrical equipment and the corresponding measurement technology:
- Compulsory participation in the laboratory practical course (PrL) is not required
- Bonus points can be gained by presenting projects from the field of electrical engineering (see examination form).

Course Content

- Basic quantities and laws of electrical engineering
- Electrical networks in direct current circuits
- Electric field and capacitor
- Magnetic field and coil
- Basics of alternating currents
- Applications of electrical networks in alternating current circuits
- Three-phase alternating current
- Basics of electrical measurement technology

Teaching material / Reading

Accompanying lectures:
- Wolfgang Bieneck: Elektro T, Grundlagen der Elektrotechnik; Information and workbook for pupils and students of electronic professions. 6th edition, Holland + Josenhans Verlag, Stuttgart, 2008
- Moodle course: Fundamentals of electrical engineering including e-tests

If required:
- Gert Hagmann: Grundlagen der Elektrotechnik, Studienbuch für Studierende der Elektrotechnik und anderer technischen Studiengänge ab 1. Semester. 11th edition, Aula-Verlag, Wiesbaden, 2005
- Rolf Unbehauen: Fundamentals of Electrical Engineering 1 and 2, 5th edition, Springer Lehrbuch, Berlin, 2000

Internationality (in terms of content)
Internationality

Module examination (if applicable, note on multiple choice - APO §9a)
Method of Assessment

Form of examination[*1)]	Type/scope incl. weighting[*2)]	Learning objectives/competences to be tested
Cl, PrL	Written exam, duration 90 minutes Regular and successful completion of practice tests (e-learning) can earn "bonus points" that count towards a maximum of 20% of the written examination. Successful participation in the electrical engineering practical course is a prerequisite for admission to the module examination. The practical course is not graded. The practical course is deemed to have been successfully completed if the student has carried out at least 75% of the experiments (compulsory attendance) and has documented the experiments by means of test protocols. Alternative dates will be offered for excused absences.	Almost all of the above-mentioned learning objectives are tested in the written exam. The learning objective "Investigate electrical issues experimentally and carry out and evaluate simple experiments in a laboratory environment" is assessed with the practical course. This learning objective cannot be assessed with a written exam. An internship is mandatory.

[*1)] Please refer to the applicable overview of the forms of examination at the OTH Amberg-Weiden
[*2)] Please provide additional information on the weighting (in % share) and, if applicable, explain the bonus system.

Materials Engineering

Usability	Teaching Methods	Workload
The module is part of the "Science/Technology" module group in the Bachelor's degree programme in Industrial/Medical Engineering (IIE/IME). The usability in other courses of study must be checked in each individual case.	Seminar-based teaching with exercises.	Contact time: 90 h Preparation/follow-up: 30 h Exam preparation: 30 h

Learning Outcomes

After successfully completing the module, students have the following professional, methodological and personal skills:

The students
should be able to evaluate the properties and fields of application of the most important materials as a basis for decisions on their technical and economic use through a comprehensive presentation and discussion.

- Know the properties and fields of application of the most important materials as a basis for decisions and assessments regarding their technical and economic use
- can understand the importance of materials technology for scientific and industrial applications based on examples in the lecture
- have a general overview of the basic classes of materials based on extensive lecture examples
- develop a conceptual understanding of the requirements-based approach to the selection and use of materials
- can apply the acquired knowledge with practiced methods and procedures on the basis of practical tasks
- are able to evaluate problems relating to suitable heat treatment and the resulting material properties and apply suitable heat treatment processes
- understand the relationships between tribological and corrosive processes and their effects on component damage based on damage cases presented in the lecture can interpret the thermal, chemical and mechanical material modification processes and make well-founded statements about the functionality and reliability of components.

Course Content

Material fundamentals with atomic structure of crystalline materials, alloy formation, thermally activated processes, mechanical properties, ferrous materials, non-ferrous metals, ceramic materials, corrosion, tribological stress, criteria for material selection, criteria for damage assessment.

Teaching material / Reading

Usability	Teaching Methods	Workload
The module is part of the "Medicine" module group in the Bachelor's degree programme in Medical Engineering (IME). The usability in other courses of study must be checked in each individual case.	Lecture, exercises, guest lecture	Contact time: 60 h Self-study: 90 h Total workload: 150 h

Learning Outcomes
Learning Outcomes

Upon successful completion of this module, students will have acquired the following technical, methodological, and personal competencies:

- Basic knowledge and understanding of medical terminology and the linguistic background for communication between members of the medical professions.
- Knowledge and understanding of human anatomy and physiology.
- Knowledge and understanding of relevant disease patterns (pathology and pathophysiology).
- Application of this knowledge to the specification, development, and use of medical technology systems.
- Ability to independently expand and deepen the acquired knowledge and skills.
- Students are able to establish the relationship between anatomy and physiology for the professional fields of development, research, and design in medical technology and to assess the technical design and functionality of medical devices.

Course Content

Introduction to Cell Biology, Tissues, Basics
Topographical Anatomy, Microscopic, Macroscopic and Functional Anatomy and Physiology:

- Skin
- Musculoskeletal System
- Blood and Immune System
- Blood and Immune System
- Cardiovascular System

Laboratory Practical in the Module "Practical Training and Scientific Work": Anatomy on Model, Specimen
Excursions to Clinical Facilities

Learning Outcomes
Learning Outcomes

Upon successful completion of this module, students will have acquired the following technical, methodological, and personal competencies:

- They know and understand the most important biological, physiological, and biophysical processes of the human body relevant to their work as medical technology engineers.
- They have the ability to recognize the origin of biosignals and thus analyze complex electronic systems that are used in medical devices.
- They have the ability to independently expand and deepen their acquired knowledge and skills in the scientific foundations of biophysics.
- In the exercises, students work and communicate cooperatively in small groups to develop solutions to technical problems in biophysics through joint discussion.

Course Content

- Basics of cell and membrane physics as well as electrophysiology
- Biological and physicochemical reactions
- Functionality of stimulators (neuro, TENS, etc.), hearing aids and cochlea implants
- Flow behavior in the cardiovascular system, biophysics of pressure distribution in the vascular system and positive feedback loops
- Analysis of signals from neuro- and sensory physiology
- Biosignal analysis methods and simple stimulators
- The exercises and group work cover the biophysical principles of ECG, audiometry, autonomic reflexes, blood pressure, spirometry, TENS/EMS, visual system with optics and deepen the acquired knowledge.

Learning Outcomes

Learning Outcomes

After successfully completing the module, students have the following technical, methodological and personal skills:

- Knowledge and understanding of the basics, areas of application and limitations of diagnostic and therapeutic devices in medical technology as well as their clinical application
- Students can establish the connection between how medical devices work and biophysics/physiology.
- Development of an awareness of the direct connection between diagnostics and therapy and their interaction in the healthcare system
- Knowledge of the structure and function of diagnostic and therapeutic devices
- The students know medical devices that are used in everyday clinical practice.
- You are able to acquire skills to help develop technical design and solution options and to assess technical appropriateness.

Course Content

- Diagnostic systems in various functional areas in the hospital
- Functionality and areas of application of medical devices
- Medical-clinical, technical and planning aspects of medical devices
- Examples of specific systems such as ultrasound, endoscopy, monitoring, functional diagnostics, laboratory diagnostics;
- Excursions to clinical users in the field of diagnostics

Learning Outcomes
Learning Outcomes

After successfully completing the module, students have the following technical, methodological and personal skills:
Expertise
• The students work on regulatory issues from the everyday life of a company, an authority or a notified body and can demonstrate solutions using the relevant laws and standards
• The students work on practical questions from everyday business life

Methodological competence
• Students can create the relevant documents for the approval of medical devices.

Personal competence
• Understand, formulate and communicate approval-relevant requirements with the relevant target group in a well-founded and effective manner (communication skills)

Course Content

- Medical device safety and monitoring
- Selected quality management tools
- International markets and approvals
- Qualification and validation
- Laws and standards

Usability	Teaching Methods	Workload
The module is part of the "Medicine" module group in the Bachelor's degree programme in Medical Engineering (IME). The usability in other courses of study must be checked in each individual case.	Lecture, exercises, guest lecture	Contact time: 60 h Self-study: 90 h Total workload: 150 h

Learning Outcomes

Learning Outcomes

After successfully completing the module, students have the following technical, methodological and personal skills:

• Students know and understand the basics, areas of application and limitations of imaging systems in medicine as well as their clinical application using examples.

• You have the ability to analyze, select, synthesize, apply, evaluate and optimize the procedures presented.

• You are able to independently expand the acquired knowledge and skills in the methodological and algorithmic areas using the specialist literature and apply them to concrete clinical problems.

Course Content

- Perception-physiological and mathematical basics (human vision and color models, representation of images in the spatial and frequency domain, interpolation processes)
- Image acquisition (raw data acquisition and image reconstruction) from ionizing (X-ray and gamma radiation) and non-ionizing (magnetic resonance, ultrasound) sources
- Fundamentals of digital medical image processing, image analysis and visualization (introduction to DICOM, point operations, linear and nonlinear operators, segmentation, object description and classification, registration procedures, extraction of level sets, visualization of volume data)
- Clinical application examples of medical imaging
- Application tasks and computer exercises for digitization, tomography, DICOM, elementary image processing operations in the spatial and spatial frequency domain, morphological image processing, segmentation, feature extraction and classification
- Internship with NIH ImageJ to test the procedures on synthetic and real, anonymized clinical images (digital X-ray images, CT images, MR images, US images, PET/SPECT images)

*** Note: Please also note the prerequisites according to the examination regulations in the respective valid SPO version.**

Usability	Teaching Methods	Workload
The module is part of the "Economics" module group in the Bachelor's degree programme in Industrial Engineering (IIE). The usability in other courses of study must be checked in each individual case.	Lecture, exercises, guest lecture	Contact time: 60 h Self-study: 90 h Total workload: 150 h

Learning Outcomes
Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

- **Professional Skills:**
  - Students know basic business administration and management terms, functions and structures. Students will know and apply selected methods for decision-making and for assessing business management situations with quantitative and qualitative background.
  - Students are familiar with the relevant relationships between companies and the environment as a result of constitutive decisions within the framework of corporate management.
  - Students understand the integration of companies in a global market environment.
- **Methodological Skills:**
  - Students apply selected methods of analysis and decision-making in practical case studies of low to medium complexity.
- **Personal Skills (Social Competence and Self-competence):**
  - Students are familiar with the appropriate language for personal communication and discussions in selected business management contexts.
  - Students analyse, interpret and structure simple practical business issues in small group teamwork.

Course Content

The course "Fundamentals of Business Administration" introduces you to the main concepts of Business Administration ("Betriebswirtschaftslehre") from a managerial perspective. The course requires no specific prerequisites.

- Introduction: Why we do business, Corporate goals and objectives,
- Organizational structure and design
- Management: Fundamentals, Management functions, Strategic management
- Human resources
- Corporate Culture
- Change and Innovation

Teaching Material / Reading

Location	Language	Duration of Module	Frequency of Module	Max. Number of Participants
Weiden	English	One Semester	Winter Semester	60

Module Convenor	Professor / Lecturer
Prof. Dr. Dr. Stefanie Steinhauser	Dr. Thomas List

Prerequisites*

None

*** Note: Please also note the prerequisites according to the examination regulations in the respective valid SPO version.**

Usability	Teaching Methods	Workload
The module is part of the "Economics" module group in the Bachelor's degree programme in Industrial Engineering (IIE). The usability in other courses of study must be checked in each individual case.	Lecture, seminar with exercises, guest lecture, computer exercise	Contact time: 60 h Self-study: 90 h Total workload: 150 h

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

Professional and Methodological Skills:

- Have an overview of the elements and functions of managerial and cost accounting.
- Describe basic instruments of managerial and cost accounting, apply them to simple business cases and derive implications from the results
- know the basics and gain fundamental skills for preparing and analysing annual financial statements and management reports.
- understand the fundamentals of balance sheet analysis and are able to calculate relevant key figures and analyse balance sheets at a low to medium level of complexity.
- can systematically collect and evaluate relevant cost information in order to subsequently apply it to determine cost rates or calculations (application and system competence).
- can identify problems in the determination of costs and calculation in practice with the acquired instrumental knowledge and solve them at least with simple approaches (problem-solving competence).
- know the basics of corporate finance and the types and special features of financial decisions and can describe them.
- explain the basics of investment decisions and selected investment calculation methods.
- select classic methods of investment calculation and corporate finance to solve practical business problems of low to medium complexity.
- analyse, interpret, structure and solve practical questions and tasks relating to corporate finance and the assessment of investment projects.

Personal Skills (Social Competence and Self-competence):

- use the technical language of business administration in assignments, for later personal communication and discussion skills in financial and investment accounting topics.
- analyse, interpret and structure practical business issues relating to corporate finance and the assessment of investment projects working individually or in small teams.

Course Content

- Tasks and basic terms of external and internal accounting
- cost accounting
- managerial accounting
- Basic terminology of the financial industry, objectives and instruments, e.g. financial ratios, finance plan.
- Capital requirements and forms of capital; types of financing; financing rules; substitution of financing, credit security.
- Practice of financial planning; liquidity planning; basics of investment management; most important procedures of static and dynamic investment calculation; types of investment; investment planning; qualitative assessment of investments.

Teaching Material / Reading

Detailed bibliographical information will be provided in the respective semester script!

Internationality (content-related)

The course content is internationally and universally relevant and applicable.

Method of Assessment (if applicable, notes on multiple choice as form of examination - APO §9a)

Form of Examination*1)	Type/Scope incl. Weighting *2)	Learning Objectives/Competencies to be Assessed
Written Exam (Kl90)	Written Exam, 90 minutes Information about multiple-choice questions and a possible bonus system will be provided via Moodle and explained in the first lecture.	With the exam and a possible bonus exercise, all of the above-mentioned competencies are tested.

*1) Please refer to the applicable overview of the forms of examination at the OTH Amberg-Weiden

*2) Please provide additional information on the weighting (in % share) and, if applicable, explain the bonus system.

Business Processes Management

Classification	Module ID	Kind of Module	Number of Credits (ECTS)
	E3	Mandatory	5

Location	Language	Duration of Module	Frequency of Module	Max. Number of Participants
Weiden	English	One Semester	Summer Semester (for winter availability, please contact the module convenor)	60

Module Convenor	Professor / Lecturer
Prof. Dr. Dr. Matthias Lederer	Prof. Dr. Dr. Matthias Lederer

Prerequisites*

None

*** Note: Please also note the prerequisites according to the examination regulations in the respective valid SPO version.**

Usability	Teaching Methods	Workload
The module is part of the "Economics" module group in the Bachelor's degree programme in Industrial Engineering (IIE). The usability in other courses of study must be checked in each individual case.	Lecture, seminar with exercises, computer exercise	Contact time: 60 h Self-study: 90 h Total workload: 150 h

Learning Outcomes

Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

- **Professional and Methodological Skills:**
  - Define and describe important terms and concepts in the field of business processes.
  - Use methods of business process modelling.
  - Recognize possibilities for the optimization of business processes and plan their realization.
  - Execute the most important software-based core business processes of a company.
  - Capture the context and the integration of the most important production-related data, functions and documents in business.
  - Identify, collect, assess and transfer relevant and necessary data for the software-supported execution of real business processes.
- **Personal Skills (Social Competence and Self-competence):**
  - The students approach their own projects in an open and structured way.
  - They are familiar with intervention techniques in organisations and are able to use them.
  - They are able to work and communicate cooperatively as a team in order to solve a problem in the field of process management in a joint discussion.
  - And they can independently expand and deepen the acquired knowledge and competences.

Course Content

- Fundamentals of business process management, process modeling, process optimization and process execution
- Business Process Modeling with different modeling techniques (e.g., EPC, BPMN)
- Methods of process design, process optimization
- Usage of current BPM tools
- Structure, sub-processes and activities of operational, production-related business processes
- Dissemination and functionality of operational planning systems as actors of a business process
- Relevant data types and sources for software-supported business processes
- Types of integration in the context of software-supported business processes

Teaching Material / Reading

- Allweyer, T. (2015): BPMN 2.0 - Introduction to the Standard for Business Process Modeling, 2nd edition, Norderstedt: Books on Demand.
- Dumas, M./La Rosa, M./Mendling, J./Reijers, H.A. (2018): Fundamentals of Business Process Management, 2nd edition, Berlin: Springer.

- Laudon, K. C./Laudon, J.P. (2018): Management Information Systems, 15th edition, Harlow: Pearson Education Limited.
- Scheer, A. W. (2000). ARIS—business process modeling. Springer Science & Business Media.

Internationality (content-related)

The course content is internationally and universally relevant and applicable.

Method of Assessment (if applicable, notes on multiple choice as form of examination - APO §9a)

Form of Examination*1)	Type/Scope incl. Weighting *2)	Learning Objectives/ Competencies to be Assessed
Written Exam (Kl90)	Written Exam, 90 minutes Bonus system: There is the possibility of grade improvement (German: "Notenverbesserung") through voluntary performances during the course. By preparing a presentation of a short relevant topic according to the semester-specific list of offers, a bonus of max. 10 % of the total number of points attainable in the written examination can be added in the same semester to the points actually attained in the written examination. The grade calculation then refers to the total points, whereby more than a grade of 1.0 cannot be achieved. The bonus points apply only in the semester in which they are earned. The list of offers is presented at the beginning of the semester and a registration deadline for the acceptance by the students will be announced. The offer exists only in semesters in which a course is offered by the lecturer. There is no individual entitlement for students to an offer such an extra ((German: "Notenverbesserung") by the lecturer.	With the exam and a possible bonus exercise, all of the above-mentioned competencies are tested.

*1) Please refer to the applicable overview of the forms of examination at the OTH Amberg-Weiden

*2) Please provide additional information on the weighting (in % share) and, if applicable, explain the bonus system.

Marketing and Sales

Classification	Module ID	Kind of Module	Number of Credits (ECTS)
	E5	Mandatory	5

Location	Language	Duration of Module	Frequency of Module	Max. Number of Participants
Weiden	English	One Semester	Winter Semester	60

Module Convenor	Professor / Lecturer
Prof. Dr. Julia Heigl	Prof. Dr. Julia Heigl

Prerequisites*

None
*** Note: Please also note the prerequisites according to the examination regulations in the respective valid SPO version.**

Usability	Teaching Methods	Workload
The module is part of the "Economics" module group in the Bachelor's degree programme in Industrial Engineering (IIE). The usability in other courses of study must be checked in each individual case.	Lecture, seminar with exercises, guest lecture, project work, practical applications using software	Contact time: 60 h Self-study: 90 h Total workload: 150 h

Learning Outcomes
Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

- Describe and critically discuss the impact of digitalization on marketing and sales.
- Explain the theoretical foundations, essential terms, concepts and tools of digital marketing.
- Analyze the changing information and purchasing behaviour of B2B decision-makers.
- Plan and implement digital marketing campaigns and measure their performance.
- Describe the digital marketing channels which are relevant for B2B companies, to discuss them critically and to apply them to real-world cases.
- Identify, describe and apply use cases for artificial intelligence in marketing automation.
- Apply content of this module in state-of-the-art software tools to practical problems.

Course Content

- The impact of digitalization on marketing and sales - strategy, marketing mix, operations.
- Foundations of digital marketing.
- Planning digital marketing campaigns.
- Customer Journey Mapping.
- Digital marketing channels and instruments - fundamentals, applications, tools and performance measurement: e.g. corporate website design; search engine marketing (SEO / SEA); influencer marketing; social media marketing; B2B e-commerce; affiliate marketing; programmematic advertising; marketing automation and email marketing.
- Application of artificial intelligence in marketing

Teaching Material / Reading

Internationality (content-related)

The course content is internationally and universally relevant and applicable. Companies from around the world will serve as example for case studies and practical examples.

Method of Assessment (if applicable, notes on multiple choice as form of examination - APO §9a)

Form of Examination*1)	Type/Scope incl. Weighting *2)	Learning Objectives/Competencies to be Assessed
Module work (ModA)	Project Work in Groups Development of a digital marketing concept for a fictive or real-life company	The group project is used to test the practical learning content and competence profiles, including teamwork and presentation skills.

*1) Please refer to the applicable overview of the forms of examination at the OTH Amberg-Weiden
*2) Please provide additional information on the weighting (in % share) and, if applicable, explain the bonus system.

Private Commercial Law

Classification	Module ID	Type of module	Number of Credit Points (ECTS)
	E6	Mandatory	5

Location	Language	Duration of the module	Frequency of Module	Max. Number of participants Max. Number of Participants
Weiden	English	One semester	Winter and summer semester	

Module Convenor	Professor / Lecturer
Prof. Dr. Christian Stauf	Prof. Dr. Christian Stauf

Prerequisites

None.
*** Note: Please also note the prerequisites according to the examination regulations in the respective valid SPO version.**

Usability	Teaching Methods	Workload
The module is part of the "Economics" module group in the Bachelor's degree programme in Industrial Engineering (IIE). The usability in other courses of study must be checked in each individual case.	Seminar-based teaching with exercises.	Contact time: 47 h Self-study: 103 h Total effort: 150 h

Learning Outcomes

After successfully completing the module, students have the following professional, methodological and personal skills:

- Professional Competence: Students know the current labor law regulations essential for a business economist, especially those of individual law, taking into account the references to social economy law. Student also receive an overview of collective labor law.
- Methodological Competence: Students are able to apply the acquired knowledge to different situations. They recognise the structural particularities of labor law and are able to solve problem cases even under altered legal conditions.
- Personal Competence / Soft Skills (Social Competence and Self Competence): Team behavior and self-organization are improved.

Course Content

- Basic principles of individual labor law, especially conclusion of the employment contract, employees' and employers' rights and obligations
- Termination of employment and protection against dismissal Fundamental principles of collective labor law, especially industrial constitution law and collective bargaining law

Internationality (Content): View on EU law and foreign legal systems

Teaching material / Reading

Lecture notes
Basic textbook: Becker; Investition und Finanzierung, Gabler-Verlag
Additional reading:

- Bodie, Merton, Cleeton: Financial Economics, Pearson International Edition
- Brealy, Myers, Allen: Principles in Corporate Finance, Mc Graw Hill International Edition
- Pape: Grundlagen der Finanzierung und Investition, Oldenburg-Verlag
- Ross, Westerfield, Jaffe: Corporate Finance, Mc Graw Hill International Edition
- Zantow: Finanzwirtschaft der Unternehmung, Pearson Studium

Internationality (in terms of content)
Internationality

The content is valid in any international industrial engineering environment.

Module examination (if applicable, note on multiple choice - APO §9a)
Method of Assessment

Form of examination[*1)]	Type/scope incl. weighting[*2)]	Learning objectives/competences to be tested
Written Exam (Kl90)	Weighting: 100%	With the exam, all of the above-mentioned competencies are tested, see Learning Outcomes and Course Content.

[*1)] Please refer to the applicable overview of the forms of examination at the OTH Amberg-Weiden
[*2)] Please provide additional information on the weighting (in % share) and, if applicable, explain the bonus system.

Product Management

Classification	Module ID	Kind of Module	Number of Credits (ECTS)

Usability	Teaching Methods	Workload
The module is part of the "Economics" module group in the Bachelor's degree programme in Industrial Engineering (IIE). The usability in other courses of study must be checked in each individual case.	Lecture; class discussion; case studies; field trip; guest lecture	Contact time: 60 h Self-study: 60 h Module work preparation: 30 h Total effort: 150 h

Learning Outcomes

Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

Professional Skills:

- Students have knowledge of how product management fits into a modern, lean and agile corporate structure and are familiar with the interfaces to other areas and roles in the company.
- The students learn how to analyze and evaluate suitable markets for product launches. In addition, the students know possibilities for the collection of customer requirements in the area of requirements analysis.
- The students know possible product strategies and can apply them practically.
- The students know the gates and phases of the product development cycle from the product manager's point of view and know his task and influence in the entire product life cycle.

Methodological Skills: Students learn methods...

- for idea generation and evaluation for new products.
- for market analysis and generation of a product launch strategy.
- for identifying, structuring and prioritizing customer requirements.
- and know its role and influence throughout the product life cycle.

Personal Skills (Social Competence and Self-competence):

- Team-oriented processing of examples and case studies in the field of product management.
- Communication and presentation of results from individual and group work.

Course Content

- Definition of the role of product management with its tasks and objectives.
- Integration of product management into different product development models and its interfaces to other roles and areas in the company.
- Requirements and market analysis and ways to generate new product ideas.
- Product portfolio management
- Development and derivation of an appropriate product development strategy and product roadmap.
- Influence in the product marketing mix and establishment of marketing strategies.
- Participation and influence in the product development process and product life cycle.
- Product launch opportunities and subsequent control.
- Digital business transformation and its influence on product management.
- Different characteristics and lifestyles of product management in the enterprise: Startup vs. SME vs. corporation.

Teaching Material / Reading

Usability	Teaching Methods	Workload
The module is part of the "Economics" module group in the Bachelor's degree programme in Industrial Engineering (IIE). The usability in other courses of study must be checked in each individual case.	Seminar-based teaching with exercises.	Contact time: 60 h Self-study: 90 h Total effort: 150 h

Learning Outcomes
Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

- **Professional and Methodological Skills:**
  - The students know the basic methods and tools of project management.
  - They are able to select the appropriate ones for a given context.
  - They can apply these methods and tools flexibly to projects.
  - They are able to manage their own projects responsibly.
  - They are prepared to deal with the dynamics of a real project.

- **Personal Skills (Social Competence and Self-competence):**
  - The students approach their own projects in an open and structured way.
  - They are able to work and communicate cooperatively as a team to manage a project together.
  - They have the ability to independently expand and deepen the acquired knowledge and competences.

Course Content

- Function, types, contents and processes of conventional project management
- Content and use of basic project documents such as project pro- posal, project order, work-breakdown-structure and Gantt-chart
- Process and resource planning in projects
- Use of an IT-tool with exercises for project planning and control
- Communication, teamwork, self-reflection and versatility in pro- jects
- Introduction and practice of agile project management methods

*** Note: Please also note the prerequisites according to the examination regulations in the respective valid SPO version.**

Usability	Teaching Methods	Workload
The module is part of the " interdisciplinary " module group in the Bachelor's degree programme in Industrial/Medical Engineering (IIE/IME). The usability in other courses of study must be checked in each individual case.	Seminar-based teaching with exercises.	Contact time: 60 h Self-study: 90 h Total effort: 150 h

Learning Outcomes

After successfully completing the module, students have the following professional, methodological and personal skills:

Technical and methodological skills:
The students:

- Know basic IT tools and can use them.
- Know about the different number systems.
- Are familiar with digital technology.
- Can use Unified Modeling Language (UML)
- Can use the tools to solve typical engineering tasks.
- Know basic algorithms.
- Can select and apply suitable algorithms for typical engineering tasks.

Personal competence (social competence and self-competence):
The students:

- Take an open and structured approach to familiarizing themselves with and using new IT tools.
- Are able to work and communicate cooperatively as a team in order to solve a technical problem in a joint discussion.
- Have the ability to independently expand and deepen the knowledge and skills they have acquired.

Course Content

The content of the course covers four areas:

- IT Tools
- Number systems
- Data types
- Digital Technology
- UML
- Algorithms

Teaching material / Reading

Information about relevant textbooks will be provided via Moodle.

Internationality (in terms of content)

The module is part of the " interdisciplinary " module group in the Bachelor's degree programme in Industrial/Medical Engineering (IIE/IME). The usability in other courses of study must be checked in each individual case.	Lecture with exercise; practical exercise in computer lab	Contact time: 60 h Self-study: 60 h Exam preparation: 30 h Total effort: 150 h

Learning Outcomes

Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

- Students know and understand the possible applications of probability calculation to problems with random events and can apply them to these problems.
- Students know and understand the most important concepts and methods of descriptive and inductive statistics and can check the applicability of different methods for statistical problems.
- Students are able to select and apply suitable methods to solve statistical problems.
- Students can analyze univariate and bivariate statistical data with the methods of descriptive and inductive statistics
- Students are able to independently expand and deepen the acquired knowledge and competences.

Course Content

- Descriptive statistics: frequency distributions; graphical representations; measures (mean, variance, correlations)
- Basic probability theory
- Random variables and theoretical distributions
- Parameter estimation and confidence intervals
- Parametric and non-parametric test methods
- Regression analysis

Teaching Material / Reading

Information about relevant textbooks and collection of formulas will be provided via Moodle.

Information about relevant textbooks and collection of formulas will be provided via Moodle.

The course content is internationally relevant and applicable.

Method of Assessment (if applicable, notes on multiple choice as form of examination - APO §9a)

Form of Examination*1)	Type/Scope incl. Weighting *2)	Learning Objectives/Competencies to be Assessed
Written Exam (Kl90)	90 minutes	The exam covers the above mentioned professional and methodological skills.

Usability	Teaching Methods	Workload
The module is part of the " interdisciplinary " module group in the Bachelor's degree programme in Industrial/Medical Engineering (IIE/IME). The usability in other courses of study must be checked in each individual case.	Seminar with exercises (role-play exercises, partner work, group work)	Contact time: 60 h Self-study: 90 h Total workload: 150 h

Learning Outcomes

Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

- Outline the most important theoretical approaches to intercultural communication.
- Explain the impact of one´s own cultural conditioning on values, perception, expectations and behavior.
- Interpret the behaviour of people from different cultures considering their respective cultural values.
- Create and apply effective communications strategies to overcome obstacles in intercultural encounters.
- Analyse intercultural business encounters by applying intercultural terminology, theory and methods and adopt the own behavior accordingly.

Course Content

- Introduction and Basic Knowledge: concept of culture, cultural identity, perception and interpretation, stereotypes and prejudices.
- Cultural Dimensions as a theoretical framework to compare cultures
- Basic communication concepts
- Application in business: multicultural teamwork, virtual teamwork, meetings with team members from different cultures, ciritcal incidents
- Negotiation as a specific form of communication

Internationality (content-related)

Given by topic of the course

Method of Assessment (if applicable, notes on multiple choice as form of examination - APO §9a)

Form of Examination*1)	Type/Scope incl. Weighting *2)	Learning Objectives/ Competencies to be Assessed
Module Work (ModA)	Team project for the preparation, implementation and reflection of an intercultural business situation / critical incident. The situation is to be acted out in the form of a role play together with a second team (duration 30 minutes, each team member must take an active role). The students represent one culture in the team, which meets a second one. The team, situation, culture and pairing as well as the date of the performance will be determined in the third course at the latest. Planning and preparation as well as the course and its critical reflection must be submitted in the form of a report (20-25 pages) on the penultimate date, each team member must make a contribution.	The form of examination covers the above mentioned professional and methodological skills.

*1) Please refer to the applicable overview of the forms of examination at the OTH Amberg-Weiden

*2) Please provide additional information on the weighting (in % share) and, if applicable, explain the bonus system.

Prof. Dr.-Ing. Manfred Beham	Prof. Dr.-Ing. Manfred Beham

Prerequisites*

None

*** Note: Please also note the prerequisites according to the examination regulations in the respective valid SPO version.**

Usability	Teaching Methods	Workload
The module is part of the " interdisciplinary " module group in the Bachelor's degree programme in Industrial/Medical Engineering (IIE/IME). The usability in other courses of study must be checked in each individual case.	Lecture; instruction seminars; practical exercise	Contact time: 60 h Self-study: 60 h Exam preparation: 30 h Total effort: 150 h

Learning Outcomes

Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

Professional Skills:

- Identify core aspects of object-oriented programmeming and features of an object-oriented language.
- Use a development environment for writing and running your code.
- Develop and implement programmes that apply core object-oriented programmeming concepts like classes, polymorphism, and method overloading.
- Use built in data-structures (collections) and functions.
- Convert a given algorithm into a procedural programme.

Methodological Skills:

- You are able to analyse and design an application using OO methods
- You can use step-by-step refinement to break down a problem into sub-problems (modularisation)

Personal Skills (Social Competence and Self-competence):

- You are also able to present solutions that have been created, to discuss their quality and alternatives and to reflect on their problem-solving strategy in a technical and methodical manner.

Course Content

This course provides an introduction to object-oriented programmeming, including an overview of the language syntax and how to develop simple applications. Students will learn how to write custom classes and methods, and how to test their code using unit testing and test-driven development. Topics include basic data structures like Arrays and Lists and concepts of inheritance or overloading methods.

Teaching Material / Reading

- Depends on the concrete used programmeming language (JAVA, Python, C++, C#); will be specified in Moodle

Internationality (content-related)

The content is valid in any international software development environment

Method of Assessment (if applicable, notes on multiple choice as form of examination - APO §9a)

Form of Examination*1)	Type/Scope incl. Weighting *2)	Learning Objectives/Competencies to be Assessed
Module Work (ModA)	Project Work: An application for a given task must be developed, documented and presented. Written: Code and documentation (70 %) Orally: Presentation (30 %)	With this practical work, all of the above-mentioned competencies are tested.

*1) Please refer to the applicable overview of the forms of examination at the OTH Amberg-Weiden

*2) Please provide additional information on the weighting (in % share) and, if applicable, explain the bonus system.

Logistics

Classification	Module ID	Kind of Module	Number of Credits (ECTS)
	I9	Mandatory	5

Location	Language	Duration of Module	Frequency of Module	Max. Number of Participants
Weiden	English	One semester	Summer semester	60

Module Convenor	Professor / Lecturer
Prof. Dr.-Ing. Günter Kummetsteiner	NN

Prerequisites*

None

*** Note: Please also note the prerequisites according to the examination regulations in the respective valid SPO version.**

Usability	Teaching Methods	Workload
The module is part of the "interdisciplinary" module group in the Bachelor's degree programme in Industrial/Medical Engineering (IIE/IME). The usability in other courses of study must be checked in each individual case.	Lectures with integrated practical demonstrations and exercises	Contact time: 60 h Pre- and post-processing: 50 h Exam preparation: 40 h Total 150h

Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological, and personal skills and competencies:

- **Professional Skills:**
  - Knowledge on logistics: Terms, problem statements, tasks, and common methods.
  - Ability to explain and use selected calculation methods.
  - Understand logistical principles and opportunities offered by an SAP ERP system (ECC 6.0 and S/4HANA).
- **Methodological Skills:**
  - Ability to know and rate different options and to consult regarding usability in different scenarios.
  - Ability to use logistics theories in practice, i.e., execute material requirements planning in an SAP ERP system.
- **Personal Skills (Social Competence and Self-competence):**
  - Ability to plan and execute typical logistics tasks from the perspective of different roles.
  - Ability to discuss with stakeholders and logistics experts on professional level.
  - Ability to collaborate as a competent interdisciplinary project team member for common logistics topics.

Course Content

- Introduction in logistics and logistics components of SAP ERP
- Product and production planning
- Production
- Procurement logistics
- Inventory management
- Distribution logistics
- Quality management (optionally)
- Recent trends and outlook

Teaching Material / Reading

Presentation script, further exercises, further training material used or recommended in lessons.

Internationality (content-related)

Much of the content covered is of relevance worldwide. One objective is to illustrate how logistics could help regarding competitiveness in a globalized world. Legal specifics of countries are not mentioned. ERP systems like SAP S/4HANA are used globally, especially in bigger companies. The terms used are valid in international context.

Method of Assessment (if applicable, notes on multiple choice as form of examination - APO §9a)

Form of Examination*1)	Type/Scope incl. Weighting *2)	Learning Objectives/Competencies to be Assessed
Written examination (Kl90)	90 min. (Weighting: 100%)	The written examination assesses the entire learning contents and competence profiles.

*1) Please refer to the applicable overview of the forms of examination at the OTH Amberg-Weiden
*2) Please provide additional information on the weighting (in % share) and, if applicable, explain the bonus system.

Usability	Teaching Methods	Workload
The module is part of the "Science/Technology" module group in the Bachelor's degree programme in Industrial /Medical Engineering (IIE/IME). The usability in other courses of study must be checked in each individual case.	Lecture; case studies; practical exercise; demonstration	Contact time: 60 h Self-study: 60 h Exam preparation: 30 h Total effort: 150 h

Learning Outcomes
Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

Professional skills and competencies:
- know structure and basic elements of sensors
- know physical sensor principles
- know physical signal transmission
- evaluate performance and accuracy of sensors
- evaluate sensor specifications
- know costs and prices of sensor solutions
- know sensor system interfaces (electrical and mechanical)
- evaluate sensor system integration
- know and evaluate disturbances variables and the related system impact.

Methodological skills and competencies:
- decide if a sensor is necessary in the system or not
- decide what kind of sensors are necessary in the system
- cost-benefit consideration in sensor selection and design
- question and evaluate sensor specifications, requirements and performance

Personal skills and competencies:
systematically and competently communicating commercial and technical sensor requirements with product developers and sensor suppliers.

Course Content

This module provides students with a comprehensive overview of the broad field of sensors for smart systems in the lecture, covering functional principles, signal processing, interfaces and applications. The various sensors are presented systematically. Basic concepts for sensing requirements and performance are presented, and costs and prices for sensor deployment are evaluated. In addition to the technical/physical understanding and resulting costs, the ability to communicate professionally with both sensor/system developers and sensor suppliers is provided. A detailed practical example example with live-demonstration of a technical/commercial sensor design is developed, evaluated and alternative solutions are considered. Solutions for various sensor tasks are worked out and presented by individual student groups.

Teaching Material / Reading

Lernziele / Qualifikationen des Moduls
Learning Outcomes

Nach dem erfolgreichen Absolvieren des Moduls verfügen die Studierenden über die folgenden fachlichen, methodischen und persönlichen Kompetenzen:

Fachliche und methodische Kompetenzen
Die Studierenden:

- Die Teilnehmer kennen und verstehen die Grundlagen des Service- und Dienstleistungsmanagements. Sie können Dienstleistungen vs. Sachgüter sowie Kundenzufriedenheit und Bewertungssysteme einordnen.
- Sie kennen (digitale) Technologien, die in Service und Instandhaltung eingesetzt werden.
- Sie können Produktionskennzahlen zur Instandhaltung (z. B. OEE) berechnen und einschätzen.
- Sie wissen, welche Kommunikationstechnologien und welche Sensorik zur Datenerfassung für Predictive Maintenance (PM) verwendet werden können.
- Sie können PM Applikationen entwickeln und verstehen die Grundlagen von Machine Learning.

Persönliche Kompetenzen (Sozialkompetenzen und Selbstkompetenz)
Die Studierenden:

- Gehen offen und strukturiert an Service- und Instandhaltungsmanagement heran.
- Sind in der Lage, als Team zusammenzuarbeiten sowie innovative Lösungen zu erarbeiten und diese zu präsentieren.
- Haben die Fähigkeit, die erworbenen Kenntnisse und Kompetenzen selbstständig zu erweitern und zu vertiefen.

Inhalte der Lehrveranstaltungen

Prerequisites

- Grundlegende Kenntnisse der Vektorgeometrie (Mathematik) und Grundlagen der Programmemierung (Informatik I)
- Interesse an Robotik und die Bereitschaft zur Mitarbeit an einem Projekt in der Kleingruppe

***Hinweis: Beachten Sie auch die Voraussetzungen nach Prüfungsordnungsrecht in der jeweils gültigen SPO-Fassung.**

Verwendbarkeit Availability	Lehrformen Teaching Methods	Workload
The module is part of the "Science/Technology" module group in the Bachelor's degree programme in Industrial /Medical Engineering (IIE/IME). The usability in other courses of study must be checked in each individual case.	Seminaristischer Unterricht, Übungen am PC mit der Stäubli-Entwicklungs-umgebung und –Simulator, Praktikum im Labor	Seminaristischer Unterricht: 30 h Übungen/Eigenstudium: 30 h Labor mit Anleitung: 30 h Projektarbeit: 60 h Gesamtaufwand: 150 h

Lernziele / Qualifikationen des Moduls
Learning Outcomes

Nach dem erfolgreichen Absolvieren des Moduls verfügen die Studierenden über die folgenden fachlichen, methodischen und persönlichen Kompetenzen:

Fachkompetenz:
Die Studierenden kennen den Aufbau und die Funktionsweise eines Industrieroboters. Sie können Bewegungsabläufe in verschiedenen Koordinatensystemen beschreiben und transformieren. Sie kennen die grundlegen Konzepte der Programmemierung, insbesondere die in der Robotik nötigen Elemente der Programmemflusssteuerung und des Multitaskings. Sie kennen die Sicherheitsrichtlinien im Umgang mit dem Roboter und können diesen mit Hilfe des Handbediengerätes steuern**.**

Methodenkompetenz:
Sie können eine VAL3-Applikation in der Stäubli-Entwicklungsumgebung konzipieren, implementieren und simulieren. Dabei sind sie in der Lage, einen komplexen Vorgang im Sinne einer Top-Down-Strategie zu modularisieren. Programmemierbare Steuerungen oder ein Bildverarbeitungssystem können in die Gesamtapplikation eingebunden werden.

Persönliche Kompetenz (Sozialkompetenz und Selbstkompetenz):
Teamarbeit und Selbstorganisation werden im Rahmen der Projektarbeit gefördert. Die Studierenden können grundlegende Methoden des Projektmanagements innerhalb ihres Teams anwenden. Sie müssen Ergebnisse und Zwischenergebnisse präsentieren.

Inhalte der Lehrveranstaltungen
Course Content

- Sicherheitseinweisung
- Der Roboter im Überblick
- Das Handbediengerät
- Orientierung/Koordinatensysteme/Kinematik
- VAL3 Applikation/Programmemierung
- Multitasking
- Einführung in die Bildverarbeitung

Prerequisites

Dieser Kurs ist gezielt auf „Nicht-Informatiker" ausgerichtet. Die Teilnehmer(innen) sollten allerdings über folgende Kenntnisse verfügen:

- Grundkenntnisse in der Softwareentwicklung mit mind. einer Programmiersprache

***Hinweis: Beachten Sie auch die Voraussetzungen nach Prüfungsordnungsrecht in der jeweils gültigen SPO-Fassung.**

Verwendbarkeit Availability	Lehrformen Teaching Methods	Workload
The module is part of the "Science/Technology" module group in the Bachelor's degree programme in Industrial /Medical Engineering (IIE/IME). The usability in other courses of study must be checked in each individual case.	Seminaristischer Unterricht mit Übungen	Gesamtaufwand: 150 h

Lernziele / Qualifikationen des Moduls
Learning Outcomes

Nach dem erfolgreichen Absolvieren des Moduls verfügen die Studierenden über die folgenden fachlichen, methodischen und persönlichen Kompetenzen:

Das Ziel ist der Erwerb grundlegender Kenntnisse in Konzeption und Entwicklung moderner SAP-Anwendungen mit ABAP Objects.

Fachkompetenz:

- Die Studierenden kennen das Grundkonzept und die Syntax der Programmemiersprache ABAP bzw. ABAP Objects und können diese anwenden.
- Die Studierenden kennen Besonderheiten, Beschränkungen und Möglichkeiten der Anwendungsentwicklung im ERP-System SAP.

Methodenkompetenz:

- Die Studierenden können einfache Anwendungen mit ABAP bzw. ABAP Objects selbständig entwerfen, im SAP-System implementieren und testen.
- Sie können die dazu erforderlichen Entwicklungswerkzeuge anwenden.

Persönliche Kompetenz (Sozialkompetenz und Selbstkompetenz):

- Im Rahmen der betreuten Programmemierübungen lernen die Studierenden ihre erstellten Lösungen zu erläutern, deren Qualität und mögliche Lösungsalternativen zu diskutieren und die persönlich angewandte Problemlösungsstrategie kritisch zu reflektieren.

Inhalte der Lehrveranstaltungen
Course Content

Die Lehrveranstaltung bietet einen Überblick über Grundlagen und Potentiale der Programmemiersprache ABAP bzw. ABAP Objects.
Als Basis werden zunächst folgende Themen behandelt:

- Navigation und Grundkonzepte in SAP ERP
- Moderne Entwicklungsumgebungen Eclipse und ABAP Workbench
- Modularisierung mit ABAP, Datentypen und DataDictionary
- Datenbankzugriffe mit SQL
- Erstellung einfacher Datenauswertungsfunktionen
- Dialogprogrammemierung mit ABAP-Dynpro's
- Debuggen von ABAP-Coding
- Erweiterte objektorientierte Techniken

Um abschließend das Nutzenpotential der ABAP-Anwendungsentwicklung im betrieblichen Umfeld zu verdeutlichen, haben die Teilnehmer(innen) am Ende des Kurses die Möglichkeit z.B.

- einen ERP-Dialog aus dem SAP-Modul Logistik individuell anzupassen
- einen spezifischen Report in die SAP-Oberfläche einzubinden
- o.ä.

Zudem werden im Laufe des Kurses weitere ABAP-Anwendungen vorgestellt.

Lehrmaterial / Literatur
Teaching Material / Reading

Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

Students will be able to describe the components and functions of communications technologies required for IoT and industrial communication.

Professional skills:

- Basics of communication technology
- Communication in Smart Factories and Industry 4.0 environments
- Knowing relevant parameters of wired and wireless communication technologies
- Usage and application of communication technologies
- Automation basics and digital technology
- Condition monitoring using communication technologies

Methodological skills:

- Ability to develop automation applications
- Being familiar with OSI and TCP/IP models
- Knowing automation pyramid

Personal Skills (Social Competence and Self-competence):

Ability to understand communication technologies and implementation in personal and industrial environments.

Learning Outcomes
Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

Students are able to
- create a specification sheet according to customer requirements and manage it in an appropriate tool environment
- operate a CAD tool
- create simple designs as 3D MCAD models
- clarify the requirements of a design task with a team, derive their own tasks and explain them
- explain the dynamic aspects of a design in teamwork

Course Content

In collaboration with students from other colleges/universities and industrial partners, a design task is carried out in the Crowd Engineering laboratory, from the creation of requirements to design and implementation in industrial operations.
The focus is on getting to know and implementing innovative methods of collaboration.
Divided into different groups, subtasks are subdivided into requirements creation, design engineering, user experience and software development. For this purpose, the complete design task is carried out with the help of a CAD tool.
A design task and the workload for each team are defined in consultation with the other partners.
The components are then developed by the individual students and then assembled.

Usability	Teaching Methods	Workload
The module is part of the "Science/Technology" module group in the Bachelor's degree programme in Industrial /Medical Engineering (IIE/IME). The usability in other courses of study must be checked in each individual case.	Lecture; instruction seminars; practical exercise	Contact time: 60 h Self-study: 60 h Exam preparation: 30 h Total effort: 150 h

Learning Outcomes
Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

Professional Skills:
- You can design and implement a relational database.
- You can obtain information from relational databases with the help of elementary SQL queries.

Methodological Skills:
- You can analyze operational processes with object-oriented methods and document them using the UML notation.
- You can create an object-oriented concept for a simple, operational application system.
- You can transform a class-model into a relational schema.

Personal Skills (Social Competence and Self-competence):
- You have the ability to describe complex information structures with abstract models.
- You are familiar with the basics of process management for working in a team on an IT project.

Course Content

- Relational database systems and their application
- Development of a relational schema
- Basics of SQL-queries
- Exercises in designing and using an exemplary relational database

Lernziele / Qualifikationen des Moduls
Learning Outcomes

Nach dem erfolgreichen Absolvieren des Moduls verfügen die Studierenden über die folgenden fachlichen, methodischen und persönlichen Kompetenzen:

Die Studierenden lernen den virtuellen Produktentwicklungsprozess unter besonderer Berücksichtigung der Methode der Finiten-Elemente (FEM) und der Mehrkörpersysteme (MKS) theoretisch und praxisnah kennen und anzuwenden:

- können die Bedeutung der virtuellen Produktentwicklung für wissenschaftliche und industrielle Anwendungen nachvollziehen
- verfügen über einen Überblick über die verschiedenen grundlegenden Simulationsverfahren
- entwickeln ein konzeptionelles Verständnis für die Vorgehensweise bei der numerischen Simulation
- können die erworbenen Kenntnisse mit eingeübten Methoden und Vorgehensweisen an Hand von Aufgabenstellungen praxisnah anwenden
- sind fähig, Problemstellungen zur virtuellen Produktenwicklung zu bewerten und Lösungswege anzuwenden
- verstehen die Zusammenhänge zwischen den Annahmen bei der Simulation und der erzielten Ergebnisse
- können die Simulationsergebnisse interpretieren und fundierte Aussagen über die Funktionalität und Zuverlässigkeit machen.

Inhalte der Lehrveranstaltungen
Course Content

- Einordnung des virtuellen Produktentwicklungsprozesses in der Forschung und Entwicklung
- Exemplarische Darstellung des Potentials der unterschiedlichen numerischen Simulationsmethoden
- Darstellung der unterschiedlichen Leichtbaustrategien
- Einführung in die Simulation mit Mehrkörpersystemen (MKS)
- Einführung und Vertiefung in die Simulation mit der Finiten Elemente Methode (FEM)
- Darstellung des Ablaufes einer Simulation (Pre-Processing, Analyse, Post-Processing)
- Übungen zu grundlegenden Anwendungen der MKS und FEM mit Bewertung der Ergebnisse

Usability	Teaching Methods	Workload
The module is part of the "Science/Technology" module group in the Bachelor's degree programme in Industrial /Medical Engineering (IIE/IME). The usability in other courses of study must be checked in each individual case.	Seminar-based teaching with exercises.	Contact time: 60 h Self-study/follow-up: 20 Exam preparation: 20 Project/construction work: 50 h

Learning Outcomes

After successfully completing the module, students have the following professional, methodological and personal skills:

Professional competence:
- They are able to analyze and evaluate designs from the field of mechanical engineering (technical expertise)
- Ability to design complex machine parts (technical expertise)

Methodological competence:
- You are able to
- apply the tools they have learned to case studies and exercises as well as simple practical tasks and systematically collect, interpret and evaluate relevant information. (Application and system competence)
- Analyze technical constructions (analysis skills)
- develop solutions based on the acquired instrumental knowledge (problem-solving skills)

Personal competence (social competence and self-competence):
- They are able to express complex technical information competently both in writing and orally, to understand technical problem solutions in order to find solutions in group work and to communicate with the relevant target group in a well-founded and effective manner. (Communication skills)

Course Content
- Strength calculation and material properties
- Axles, shafts and journals
- Rolling and plain bearings
- Positive and non-positive shaft-hub connections
- Screw connections
- Tolerances and fits
- Overview of gearbox types: belt, chain and gearwheel gearboxes
- Power flow
- Modeling
- Technical documentation and presentation
- Development project: Dimensioning of components and selection of suitable machine elements for a medical technology product

Lernziele / Qualifikationen des Moduls
Learning Outcomes

After successfully completing the module, students have the following professional, methodological and personal skills:

- Knowledge and understanding of the fundamentals of therapeutic systems in medical technology;
- Ability to assess the methods of therapeutic procedures in medical technology.
- Ability to assess the technical appropriateness of individual therapeutic procedures and their application to patients in practice;
- Ability to independently expand and deepen the acquired knowledge of the functioning of therapeutic systems.

Inhalte der Lehrveranstaltungen
Course Content

- Structure and basics of therapeutic systems;
- Areas of application in outpatient and clinical medicine;
- Physical, technical and planning aspects of medical devices for therapeutic procedures;
- Medical technology using the example of radiotherapy, brachytherapy, therapy with open radioactive substances and X-ray therapy;
- Exercises in planning the installation of therapeutic systems with the specifications from the relevant DIN standards;
- Practical laboratory course with exercises on an irradiation planning system for brachytherapy or teletherapy therapy

Lehrmaterial / Literatur
Teaching Material / Reading

- Relevant literature will be announced in the lecture at the beginning of the semester.

Lernziele / Qualifikationen des Moduls
Learning Outcomes

After successfully completing the module, students have the following professional, methodological and personal skills:

Professional competence:
Students
- are able to abstract design tasks (functional analysis) and develop and evaluate various possible solutions (conception)
- acquire the ability to dimension and design complex machine parts (design)
- create designs using a commercial CAD programme (assemblies, technical drawings)

Personal competence (social competence and self-competence):

- They are able to express complex technical information competently in writing as well as orally, to find solutions in a group work, to understand technical problem solutions and to communicate with the relevant target group in a well-founded and effective manner. (Communication competence)

Inhalte der Lehrveranstaltungen
Course Content

- - Product development process (PEP)
- - Modular product structuring (interfaces)
- - Requirements for machine elements in medical devices
- - From requirements to validation: basic concept of product design and the V-model, processes, requirements engineering, systems engineering, implementation, design verification and design validation, product development according to ISO 13485, laws and standards, regulations, product liability, legal normative and organizational framework conditions
- - Models and virtual product development (FEM analyses with ANSYS)
- - Test plans and product safety
- - Technical documentation and presentation techniques
- - Development project

Lecture; seminar-based teaching; exercise/project work; laboratory practical; excursion	Contact time: 60 h Self-study: 90 h Total workload: 150 h

Lernziele / Qualifikationen des Moduls
Learning Outcomes

After successfully completing the module, students have the following technical, methodological and personal skills:

- Knowledge and understanding of the fundamentals and special features of medical measurement technology compared to conventional measurement technology;
- Ability to independently set up and optimize medical measurement systems, analyze and quantify measurement errors, recognize and minimize undesirable influences on medical measurements, critically compare, select, adapt and evaluate different sensor principles and measurement methods in medical technology with regard to their suitability;
- Competence to act independently in the professional fields of development, research, design, production, sales and service in medical technology;
- Ability to reflect ethically on interdisciplinary problem areas of human medical measurement technology

Inhalte der Lehrveranstaltungen
Course Content

-
-Introduction, basics and special features of medical metrology
-Basic concepts of measurement technology: measurand, unit of measurement, SI system of units, standards
-Classification, conversion and characterization of measurement signals
-Various measurement methods and measuring equipment
-Evaluation of measurement results: Basic concepts, random or systematic deviation
-Basics of electronic measuring amplifiers and biosignal amplifiers
-Measurement of bioelectric signals and non-electric physiological variables

-Lecture-integrated seminar exercises on the above content

-Lecture-integrated practical course on topics: Introduction to the use of a universal digital biosignal amplifier; practical experiments, e.g. on electromyography (EMG), electrooculography (EOG), electroencephalography (EEG); implementation of selected case studies from medical measurement technology where applicable

Lehrmaterial / Literatur
Teaching Material / Reading

Relevant literature will be announced in the lecture at the beginning of the semester.

Usability	Teaching Methods	Workload
The module is part of the "Medicine" module group in the Bachelor's degree programme in Medical Engineering (IME). The usability in other courses of study must be checked in each individual case.	Lecture, exercises, guest lecture	Contact time: 60 h Self-study: 90 h Total workload: 150 h

Learning Outcomes
Learning Outcomes

After successfully completing the module, students have the following technical, methodological and personal skills:
Expertise
- Knowledge and understanding of the basics, areas of application and limitations of in-vitro diagnostic systems and their application
- Knowledge of the structure and function of in-vitro diagnostic systems
- Development of an awareness of the direct connection between diagnostics and therapy and their interaction in the healthcare system
- Knowledge and understanding of the production, application and mode of action of pharmaceutical products

Methodological competence
- Application of the knowledge learned to simple case studies and exercises as well as simple practical tasks (application and system competence)

Personal competence
- Absorb complex information, understand scientific issues and communicate well-founded and effectively with the relevant target group (communication skills)

Course Content

- Importance of laboratory medicine
- In vitro diagnostic systems: clinical chemistry, immunology and molecular diagnostics;
- Applications of in-vitro diagnostics decentralized and local;
- Automation in in-vitro diagnostics
- Dosage forms of medication
- Pharmacokinetics and dynamics
- Drug development and approval
- Manufacturing of medicines

Teaching Material / Reading

- Relevant literature will be announced in the lecture at the beginning of the semester.

Internationality (content-related)

The course content is internationally and universally relevant and applicable.

Method of Assessment (if applicable, notes on multiple choice as form of examination - APO §9a)

Form of Examination*1)	Type/Scope incl. Weighting *2)	Learning Objectives/Competencies to be Assessed
Written Exam (Kl90)	Written Exam, 90 minutes Information about multiple-choice questions and a possible bonus system will be provided via Moodle and explained in the first lecture.	With the exam, all of the above-mentioned competencies are tested.

*1) Please refer to the applicable overview of the forms of examination at the OTH Amberg-Weiden
*2) Please provide additional information on the weighting (in % share) and, if applicable, explain the bonus system.

Business Model Innovation

Classification	Module ID	Kind of Module	Number of Credits (ECTS)

Usability	Teaching Methods	Workload
The module is part of the "Economics" module group in the Bachelor's degree programme in Industrial Engineering (IIE). The usability in other courses of study must be checked in each individual case.	Guided project work	Contact time/coaching: 60 h Self-study and project work: 90 h Total workload: 150 h

Learning Outcomes

Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

Professional Skills:

- Students analyze current and expected environment, industry, and company specifics, particularly with regard to the effects of digitization (and other megatrends).
- Students will analyze customer needs and develop new value propositions.
- Students will analyze, develop and evaluate business models, including revenue model and necessary architecture (resources, activities, partnerships).

Methodological Skills:

- The students apply common methods of business model development, requirements and needs analysis as well as innovation approaches for the further development of the business model in a concrete (practical) project. They use personas, business model canvas and other templates.
- Students recognize intercultural and interdisciplinary challenges in teamwork and adapt their working methods accordingly.
- The students use digital cooperation and communication tools.

Personal Skills (Social Competence and Self-competence):

- Students will be able to cooperatively plan and execute a team project on time, working effectively and thoughtfully, especially in a heterogeneous, interdisciplinary, and international team, and if necessary, leading the team.
- Students will be able to communicate results effectively and express complex information concisely and comprehensively, both orally and in writing.

Course Content

Global megatrends such as digitization have a radical impact on what and how companies create benefits for customers (value proposition innovation), how these benefits are delivered (architectural innovations) and how companies earn money (revenue model innovations). Therefore, existing business models must be deliberately changed in the sense of a business model innovation or others must be created from scratch. In contrast to product or process innovations, business model innovations thus directly address a company's business model. Not only are customer needs better satisfied, but the basic structures and competitive rules of the industry are also called into question.

As part of the module, students work on an international project in teams with students from other universities on a current, real-life practical issue in which a new platform business model (virtualtraveller.com) is to be scrutinized and made more attractive for both end users (young travelers) and advertisers (including FinnAir, Samsung, but also small local providers).

The task will be worked on in defined sub-steps, supported by teaching units on the following topics:
- Working with the Business Model Canvas: analysis, development and evaluation of an own business model.
- Impact of digitalization and other megatrends on business models and organizations
- Platform business
- Basics of the design thinking process
- Understanding user groups and their needs, requirements and problems (developing persona)
- Working with a 360° camera, shooting your own filem
- Brainstorming and creativity techniques
- Evaluating market potential and revenue model
- Business models in practice

Teaching Material / Reading

Kim, W. C./Mauborgne, R.: How to create uncontested market space and make the competition irrelevant. Harvard Business Review, 4. Jahrgang (2005), Nr. 13, 1-2.

Osterwalder, A./Pigneur, Y.: Business model generation: a handbook for visionaries, game changers, and challengers. John Wiley & Sons, 2010.
Robier, J.: UX Redefined. Winning and Keeping Customers with Enhanced Usability and User Experience, Springer 2016.

Internationality (content-related)

The project takes place in cooperation with the universities Haaga-Helia University of Applied Sciences, Helsinki/Finland and Thomas More Hoge-school, Geel/Belgium.
Teams are international and must communicate in English.
The accompanying lectures will also be held in English.
The practical question dealt with is of international relevance.

Method of Assessment (if applicable, notes on multiple choice as form of examination - APO §9a)

Form of Examination[*1)]	**Type/Scope incl. Weighting** [*2)]	**Learning Objectives/Competencies to be Assessed**
Module work (ModA)	Project work (written + oral) in groups of approx. 6 students each (2 from Weiden, 4 from Finland and/or Belgium) on a business question presented at the beginning of the semester in several phases, which are presented at the project kickoff and are to be worked on successively. Each student has to contribute individually to the common task. The overall results are to be submitted in the form of a pitch video (English) as well as a written summary (approx. 15 pages per German group of 2, language English or German), weighting 50/50.	The group project is used to test the practical learning content and competence profiles, including teamwork and presentation skills.

[*1)] Please refer to the applicable overview of the forms of examination at the OTH Amberg-Weiden
[*2)] Please provide additional information on the weighting (in % share) and, if applicable, explain the bonus system.

Learning Outcomes

Nach Abschluss des Moduls sind die Studierenden in der Lage:

Fachkompetenz:

- diskutieren anhand technologischer Innovationen und des Produktlebenszyklus die Rolle und die Aufgaben der Einkaufsorganisation sowie die lang- und kurzfristigen Herausforderungen der Beschaffung
- kennen unterschiedliche Beschaffungsziele und Standpunkte (Hersteller, Entwickler, Lieferant, Beschaffer)
- verstehen die Bedeutung von strategischen Entwicklungspartnern
- erläutern Beschaffungsstrategien sowie die Hintergründe von Lieferantenstrategien.
- lernen verschiedene Einkaufsorganisationen kennen.
- erkennen Bedarfe, definieren Anforderungsprofile, klassifizieren Beschaffungsobjekte und verstehen Lasten- und Pflichtenhefte.
- sammeln Informationen über Beschaffungsmärkte, deren Strukturen und Zusammensetzung
- suchen und qualifizieren Lieferanten
- verstehen den Prozess des Anfragemanagements und kennen Möglichkeiten beim Aufbau von Wettbewerbsdruck sowie die Chancen und Risiken des Global Sourcing
- verstehen Kennzahlensysteme zur Erfolgsmessung
- diskutieren den Einsatz von KI und elektronischen Auktionen

Methodenkompetenz:

- klassifizieren Produkte mithilfe von Methoden wie ABC & XYZ-Analyse
- führen Make-or-Buy Analysen durch
- entwickeln ein einfaches Lieferantenbewertungssystem, z.B. mittels Nutzwertanalyse
- bewerten Angebote, Preisstrukturen und Lieferanten
- kennen Methoden und Aufgaben des Cost Engineering
- kennen verschiedene Verhandlungsstrategien und nutzen Verhandlungstaktiken
- können Methoden des Risk Monitorings anwenden

Persönliche Kompetenz (Sozialkompetenz und Selbstkompetenz):

- Die Studierenden sind in der Lage strukturierte Entscheidungen zu treffen, Ergebnisse effektiv zu kommunizieren und komplexe Informationen prägnant und umfassend sowohl schriftlich als auch mündlich kompetent auszudrücken.
- können sich eigenständig einen Überblick über die wesentlichen technologischen Aspekte der modernen Beschaffung erarbeiten, reflektieren dabei gewonnene Erkenntnisse kompetent, dokumentieren nach technisch-wissenschaftlichen Standards, und präsentieren ihre Ergebnisse überzeugend

Inhalte der Lehrveranstaltungen
Course Content

- Einführung in das Beschaffungsmanagement
- Aufgaben der Beschaffung entlang des Produktentstehungsprozesses und des Produkt Life Cycles (Value- und Innovationsmanagement, Lieferantenmanagement, Ersatzteilgeschäft), Cost Engineering (Konzeptwertanalysen bis zu Produktkalkulation: Zero Base, Best Practice, Optimierung)
- Beschaffungsziele und deren Gewicht (z.B. Nachhaltigkeit, Kosten, Versorgungssicherheit)
- Aufbau einer Sourcing-Strategie (z.B. Single/Dual/Multiple, Global/Local, Make/Buy)
- Beschaffungsorganisationen, Aufgaben strategisch vs. operativ, Lokalisierungen, Werkeversorgung (zentral oder lokal)
- Bedarfserkennung
- Beschaffungsmarktforschung
- Lieferantenqualifizierung und Anfragemanagement
- Angebotsanalyse
- Verhandlungsmanagement

- Beschaffungs- und Risk-Controlling
- Lieferantenmanagement
- Diskussion, Recherche, Austausch zu aktuellen Trends und Technologien des Beschaffungsmanagements

Verwendbarkeit Availability	Lehrformen Teaching Methods	Workload
The module is part of the "Economics" module group in the Bachelor's degree programme in Industrial Engineering (IIE). The usability in other courses of study must be checked in each individual case.	Seminaristischer Unterricht mit Planspiel, Übungen und Fallstudien	Kontaktzeit: 60 h Eigenstudium: 90 h Gesamtaufwand: 150 h

Lernziele / Qualifikationen des Moduls
Learning Outcomes

Fachkompetenz:

- die gängigen theoretischen und praxisüblichen Ansätze und Instrumentarien zur Analyse, Formulierung und Auswahl von Strategien sowie deren Implementierung zu beschreiben,
- relevante Funktionen der betrieblichen Leistungserstellung und -vermarktung und deren Abhängigkeiten zu beschreiben und mittels ausgewählter Kennzahlen zu beplanen,
- diese im Rahmen eines Unternehmensplanspiels sowie anhand von Fallstudien anzuwenden und Herausforderungen der Umsetzung im Unternehmensalltag zu verstehen. (Fachkompetenz Wirtschaft)

Methodenkompetenz:

- ausgewählte Kennzahlen zur Planung von Material- und Geldflüssen in der betrieblichen Leistungserstellung und -vermarktung zu beplanen,
- relevante externe Chancen und Risiken sowie interne Stärken und Schwächen systematisch zu sammeln und dabei insbesondere auch ihr Wissen aus Technologie und Ingenieurswissenschaften zu verwenden (Transfer Kompetenz) um diese Informationen zu interpretieren und zu bewerten, um sie in der Folge zur Strategieableitung zu nutzen (Anwendungs- und Systemkompetenz)
- Unternehmensstrategien und strategische Herausforderungen zumindest einfach mittels logischer, schlüssiger Argumentation und nachgewiesener Tatsachen zu analysieren. (Analyse- und Synthesekompetenzen)

Persönliche Kompetenz (Sozialkompetenz und Selbstkompetenz):

- das Handeln der Unternehmensführung ethisch und in Bezug auf diverse Anspruchsgruppen zu reflektieren. (Ethikkompetenz)

Inhalte der Lehrveranstaltungen
Course Content

- Grundlagen der Unternehmensführung
- Normatives Management: Unternehmensziele, Vision, Mission, Unternehmensverfassung und -kultur
- Strategisches Management auf Geschäftsfeld- und Unternehmensebene
- Unternehmensplanspiel: Die Studenten übernehmen dabei die Rolle des Geschäftsleitungsgremiums und konkurrieren in Teams. Komplexe Entscheidungssituationen u.a. Wettbewerbsstrategien, Portfolio Management, Festlegen von Produkteigenschaften, Preis, Vertrieb und Kommunikation, Produktions- und Ressourcenplanung, Investitionsentscheidungen und Finanzierung, Personalmanagement, Rohstoffeinkauf und Logistik) werden informationsunterstützt in der Gruppe aufbereitet und bearbeitet. Entscheidungen werden auf Basis von betriebswirtschaftlichen Analysen (u.a. Finanzberichte: Bilanz, GuV, Kapitalflussrechnung, Segmentbericht; Kostenrechnung; Steuerung mit Kennzahlen zur Rentabilität, Liquidität, Finanzierung, Vermögensstruktur) und Berechnungen fundiert getroffen. Die Studierenden erhalten bzw. erarbeiten sich dazu Planungs- und Steuerungstools. Die Studierenden erstellen Ausarbeitungen zu strategischen Entscheidungen sowie Kapitalmarktentscheidungen. Das Planspiel schließt mit der Simulation einer Hauptversammlung ab.

Guided project work	Contact time/coaching: 60 h Self-study and project work: 90 h Total workload: 150 h

Learning Outcomes
Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

The participants acquire detailed expertise in the field of international marketing. Effective international marketing is increasingly important for companies due to rising international connectivity between countries and companies, and companies' need to grow by selling their products and services globally. They can understand, explain, reflect, and apply the theories, concepts, and terminology of the field and are familiar with empirical studies in the field of international marketing. The participants understand the challenges of international marketing and can independently develop solutions for problems to questions of standardization and differentiation in an international context, of international market entry, and of the design of the marketing mix in an international context. They also understand these aspects with regard to different industries (B2B, B2C) and different countries Special attention is paid to the transfer of theoretical contents to practical examples. Therefore, different country and company case studies are included in the form of video interviews. The participants are provided with interesting insights into the international marketing activities of several international companies headquartered in the Nürnberg Metropolitan Area.

Course Content

Course structure
I. Foundations
1. Challenges and Opportunities of International Marketing
II. Methods
2. International Market Research
III. Strategies
3. International Market Entry Strategies
4. Standardization vs. Differentiation of International Marketing
IV. Policies: International Marketing Mix
5. International Product Policy
6. International Price Policy
7. International Placement Policy
8. International Promotion Policy

Learning Outcomes
Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

Performance management is a comprehensive systematic approach aimed at aligning the performance of groups and individuals with organizational goals and strategy and at achieving continuous improvement. Strategically derived performance indicators and motivational interventions such as goal setting, feedback, and participation are core elements of performance management. This course covers several topics that are relevant for the design of effective performance management systems.

Course Content

Course structure
1. Motivational Theories
2. Performance Evaluation
3. Productivity Measurement and Enhancement System (ProMES)
4. Case Study
5. Developing a Team Vision
6. Developing Objectives
7. Developing Indicators
8. Developing Contingencies
9. Developing a Feedback Report

The module is part of the "Interdisciplinary" module group in the Bachelor's degree programme in Industrial Engineering (IIE). The usability in other courses of study must be checked in each individual case.	details to be specified in the first semester the module is taught	Contact time: 60 h Self-study: 90 h Total effort: 150 h

Learning Outcomes
Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

In this module, students develop the Weiden Smart Factory by conducting several projects within the factory. Students define projects and apply the visited lectures to conduct them, e.g., Project Management, Industrial Engineering or Communication Technology.

Projects can be (selection):
- Human-Robot-Interaction and mobile/stationary robot applications
- Assembly applications and worker assistant systems
- Predictive maintenance procedures
- Augmented/Virtual Reality applications
- Communication technology and automation applications (e.g., for training purposes)
- Logistics application (e.g., AGVs, RFID, 5G)

Technologies and methods that can be applied (selection):
- Machine Learning algorithms (both vision and data driven)
- Digital technologies (e.g., AR/VR)
- Automation programmeming
- Data mining
- Human-Robot-Interaction
- Software/hardware development

Course Content
- Defining and structuring of Smart Factory applications
- Project Management of defined project
- Conceptual engineering (design, CAD, PCB layout, etc.)
- Conduction phase (programmeming, assembling, etc.)
- Test/validation phase

Lecture; instruction seminars; practical exercise	Contact time: 60 h Self-study: 60 h Module work preparation: 30 h Total effort: 150 h

Learning Outcomes
Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

- Be an able and critical consumer of research
- Be able to create a formal statement and proposal of research addressing well-formed research questions
- Understand the process of research inquiry and apply it to an appropriate research design
- Gain a practical working knowledge of a variety of research methods and analytical techniques relevant to social and/or engineering research
- Understand and evaluate the advantages and disadvantages of quantitative and qualitative research for addressing particular policy issues.
- Critically analyze and evaluate existing research reports and identify the intent of the research
- Effectively communicate research findings through oral, visual and written methods

Course Content

• Role of research in management and engineering
• Evidence-based practice
• Applied research design process
• Critical evaluation of published research
• Objectivity, validity and reliability
• Quantitative and qualitative research strategies
• Questionnaire design
• Observation methods
• Interviewing
• Content analysis
• Data analysis

Lernziele / Qualifikationen des Moduls
Learning Outcomes

Nach dem erfolgreichen Absolvieren des Moduls verfügen die Studierenden über die folgenden fachlichen, methodischen und persönlichen Kompetenzen:

Fachkompetenz:
Die Studierenden können nach dem Usability Engineering Prozess entwicklen.

Methodenkompetenz:
Die Studierenden können Methoden (z.B.Prototyping, Usability Testing inkl. Auswertung) anwenden, um das User Interface für den Benutzer effizient und effektiv zu entwicklen.

Persönliche Kompetenz (Sozialkompetenz und Selbstkompetenz):
Die Studierenden sind in der Lage nutzerzentriert zu denken und zu entwickeln. Sie sind in der Lage eigene Annahmen im Entwicklungsprozess zurückzustellen.

Inhalte der Lehrveranstaltungen
Course Content

Die Inhalte der Lehrveranstaltung orientieren sich am Curriculum „Certified Professional for Usability and User Experience" (CPUX). Anhand eines praxisnahen Beispiels wird der UX-Prozess zudem exemplarisch erarbeitet. Hierbei lernen die Studierenden auch den Einsatz von Softwaretools wie z.B. Axure für das High-Fidelity Prototyping.

Learning Outcomes
Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

In this module, students develop digital solutions based on innovations and questions from industrial companies. Students work solution-oriented in order to develop a digital solution. The procedure starts with understanding the issues, planning the project professionally based in project management tools, developing the solution (e.g. in form of a prototype) and presenting it to the "customer". Finally, usability and acceptance engineering will be conducted based on the developed prototype. The projects can also be self-invented.

Professional and Methodological Skills:
- Applied project management (classic and agile)
- User-centered development and design
- (Rapid)-Prototyping
- Acceptance engineering
- Usability engineering

Personal Skills and Competencies:
- Interaction with real industrial questions
- Communication with industrial companies
- Critically reflect upon own ideas
- Solution-driven thinking
- Presentation skills

Course Content
- Applied project management (classic and agile)
- User-centered development and design
- (Rapid)-Prototyping
- Acceptance engineering

Internationality (content-related)

Students develop digital solutions in cooperation with international companies.

Method of Assessment (if applicable, notes on multiple choice as form of examination - APO §9a)

Form of Examination*1)	Type/Scope incl. Weighting *2)	Learning Objectives/Competencies to be Assessed

Module work (ModA)	Project Work in Groups, including final presentation and documentation	The group project is used to test the practical learning content and competence profiles, including teamwork and presentation skills.

*1) Please refer to the applicable overview of the forms of examination at the OTH Amberg-Weiden
*2) Please provide additional information on the weighting (in % share) and, if applicable, explain the bonus system.

Entrepreneurial Project 2: Business Plan for a Digital Product

Classification	Module ID	Kind of Module	Number of Credits (ECTS)
	I16	Mandatory	5

Location	Language	Duration of Module	Frequency of Module	Max. Number of Participants
Weiden	English	One Semester	Winter Semester, start expected in winter 2024/25	30

Module Convenor	Professor / Lecturer
Dr. Bastian Vergnon	Dr. Bastian Vergnon

Prerequisites*

None

*** Note: Please also note the prerequisites according to the examination regulations in the respective valid SPO version.**

Usability	Teaching Methods	Workload
The module is part of the " Interdisciplinary " module group in the Bachelor's degree programme in Industrial /Medical Engineering (IIE/IME). The usability in other courses of study must be checked in each individual case.	Seminaristic lecture, team work	Contact time/coaching: 60 h Self-study: 90 h Total workload: 150 h

Learning Outcomes

Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

- Know the important concepts and instruments of entrepreneurship.
- Identify and understand the determinants of successful entrepreneurship and apply them.
- Find, analyse and evaluate business ideas in a systematic process.
- Develop and evaluate alternative solutions to individual modules of a business plan and select the best possible solution alternative with regard to the success potential of the business idea.
- Understand the interactions between the planning modules of a business plan and adjust the planning parameters accordingly.
- Present a convincing business idea for potential investors.

Course Content

Team project continued: business plan, commercialisation and business model for developed digitisation solution.

- Finding ideas for an innovative and sustainable business idea and evaluating them with regard to their prospects of success.
- Methods for the development of a business plan.
- Linking elementary economic basic functions (e.g. planning, evaluating, analysing consequences, adjusting planning parameters) along the steps to create a business plan for a business idea in an iterative process.
- Development of a business plan containing all essential components for the documentation and presentation of a business idea to potential investors:
  - o Trigger, Background
  - o Product and service
  - o Customer benefits and USPs (Unique Selling Proposition) o Entrepreneur team
  - o Market and competition
  - o Target groups, marketing and sales
  - o Business system and organization
  - o Timetable for implementation
  - o Opportunities and risks
  - o Financial plan and financing

The module is part of the " Interdisciplinary " module group in the Bachelor's degree programme in Industrial /Medical Engineering (IIE/IME). The usability in other courses of study must be checked in each individual case.	Guided project work	Contact time/coaching: 60 h Self-study and project work: 90 h Total workload: 150 h

Learning Outcomes
Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

The consistent overstepping of planetary boundaries by humans is the cause of many environmental problems and social tensions regionally, globally and between generations. For sustainable development in the sense of a fair distribution of resources, an interdisciplinary approach to solutions and the consideration of the interrelationships of social, ecological and economic factors and actors are indispensable. The course "Basics Sustainability" teaches the most important sustainability models and analysis methods for sustainable development. From environmental and resource economics, basic methods for a fair distribution of environmental goods as well as environmental policy instruments and tools for sustainable spatial design are presented. With regard to materiality, the goal is the use of renewable raw materials for the production of materials and products, the recycling or pollutant-free landfilling of existing products and materials, and the optimisation of natural processes from a material and energy point of view. Against the background of climate change, students learn about current technologies and developments and assess measures in the field of renewable energy systems in the context of grid expansion, energy distribution and storage technologies.

Course Content

Course structure
1. General principles of sustainability
2. Economic framework for sustainability
3. Materiality and sustainability
4. Energy and sustainability

Learning Outcomes
Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

In order to account for the increasing importance of blockchain technology in business practice and in order to get students ready for this new wave of innovation, we created this course, entitled "Blockchain Applications for Business". In a nutshell, by taking this course, students can acquire a holistic understanding of basic blockchain fundamentals and gain comprehensive insights into the potential of blockchain technology in a multitude of business use cases. That said, this course will help students understand current developments in blockchain from many diverse perspectives and lay a solid foundation to further explore the blockchain topic.

Course Content

Course structure
1. Foundations of Blockchain Technology and Applications
1.1 Introduction to Blockchain Technology
1.2 Tech Basics of Blockchain Technology
1.3 Exploring the Bitcoin Whitepaper
1.4 Hands-on Tutorial: Smart Contracts on Ethereum
2. The Value Proposition of Blockchain Technology
2.1 Strengths and Weaknesses of Blockchain Technology
2.2 Identifying Business Opportunities in the Blockchain Space
3. Blockchain Use Cases in Different Business Areas
3.1 Use Cases of Blockchain: Introduction & Marketing
3.2 Use Cases of Blockchain: Finance Industry
3.3 Use Cases of Blockchain: Automotive Industry
3.4 Use Cases of Blockchain: Supply Chains & IoT
3.5 Use Cases of Blockchain: Vocational Education Training
4. A Differentiated Perspective on Blockchain: Legal, Societal, and Ecological Aspects of Blockchain

Practical Phase

Internship

Classification	Module ID	Kind of Module	Number of Credits (ECTS)
	PS	Mandatory	25

Location	Language	Duration of Module	Frequency of Module	Max. Number of Participants
Location of the company / organization	Determined by place and company of the practical phase	One Semester	Offered each semester	

Module Convenor	Professor / Lecturer
Prof. Dr. Kris Dalm	

Prerequisites*

Successful completion of all modules of study section 1 and German level B2.2
*** Note: Please also note the prerequisites according to the examination regulations in the respective valid SPO version.**

Usability	Teaching Methods	Workload
Applicability in the further course of studies: Successful completion of the internship semester is a prerequisite for registration for the bachelor's thesis. University-wide applicability: The usability in other study programmes must be checked in each individual case.	Pactical phase	Effort for internship: Duration 20 weeks in the company with a working time usual in the company for full-time work.

Learning Outcomes
Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

- Students have gained insight into a company's value creation processes through independent work in planning, organisation or control tasks or participation in projects.
- Students have applied and reflected on knowledge, methods and procedures which have been taught in the theoretic studies.

Course Content

- Independent work on projects and problems, the topics of which are closely related to the completed studies or represent a valuable addition.
- Application and deepening of knowledge, methods and procedures already gained, which are taught and conveyed in the theoretic studies.

Teaching Material / Reading

- Guideline for the practical study semester for the Bachelor's degree programmes of the Faculty of Industrial Engineering and Healthcare
- Training plan for the practical semester in the Bachelor's degree programmes of the Faculty of Industrial Engineering and Healthcare

Documents available at: https://www.oth-aw.de/myoth/studiengangsdokumente

Internationality (content-related)

Students who have acquired their university entrance qualification outside Germany are recommended to complete the internship in Germany, ideally in a company with an international orientation.
German students are recommended to complete the internship in a non-German speaking country.

Method of Assessment (if applicable, notes on multiple choice as form of examination - APO §9a)

Form of Examination*1)	Type/Scope incl. Weighting *2)	Learning Objectives/Competencies to be Assessed
Internship report	Internship report with the rating "passed" (the report is reviewed by the supervisors of the internship).	The internship report is used to assess the overall learning content and competency profiles.

*1) Please refer to the applicable overview of the forms of examination at the OTH Amberg-Weiden
*2) Please provide additional information on the weighting (in % share) and, if applicable, explain the bonus system.

Bachelor Thesis

Bachelor Thesis

Classification	Module ID	Kind of Module	Number of Credits (ECTS)
	BA	Mandatory	10

Location	Language	Duration of Module	Frequency of Module	Max. Number of Participants
Not location-bound	English or German	Refer to SER	According to study progress	1

Module Convenor	Professor / Lecturer
Exam committee chair	First and second supervisor or first reviewer

Prerequisites*

Cf. Programme and Examination Regulations, General Examination Regulations.
Furthermore, the guidelines of the Faculty of Industrial Engineering and Healthcare "Wissenschaftliches Arbeiten: Preparation of a Thesis" must be observed. The current version is available on the OTH_Homepage under myOTH.

*** Note: Please also note the prerequisites according to the examination regulations in the respective valid SPO version.**

Usability	Teaching Methods	Workload
Bachelor Thesis in the study programme Diogital Technology and Management. The usability in other study programmes must be checked in each individual case.	Bachelor Thesis	300 h

Learning Outcomes
Learning Outcomes

After successful completion of the module, students will have acquired the following professional, methodological and personal skills and competencies:

- Independent methodical elaboration of a practice-relevant, definable (sub-)project in a study programmeme-related environment and written documentation in the form of a scientific paper.

Course Content

Depending on the task

Teaching Material / Reading

Own research

Internationality (content-related)

choice of an internationally relevant topic and/or company

Method of Assessment (if applicable, notes on multiple choice as form of examination - APO §9a)

Form of Examination*1)	Type/Scope incl. Weighting *2)	Learning Objectives/Competencies to be Assessed
Bachelor Thesis	The final thesis is to be written after individual consultation with the first examiner. Regulations for processing are contained in the study programme and examination regulations as well as in the general examination regulations. The guidelines of the Faculty of Industrial Engineering and Healthcare "Scientific work: Preparation of a Thesis" must be observed. The current version is provided on the OTH homepage under myOTH.	Depending on the specific task, the above-mentioned competencies are tested via the bachelor thesis.

*1) Please refer to the applicable overview of the forms of examination at the OTH Amberg-Weiden
*2) Please provide additional information on the weighting (in % share) and, if applicable, explain the bonus system.
